THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED SUGAR FACTORY ON L.R. NO. TRANSMARA/MOITA/761 IN LOLGORIAN WARD, TRANSMARA SUB-COUNTY, NAROK COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to section 59 of the Environmental Management and Co-ordination Act, 1999, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent Kenya Sugar Factory Limited, proposes to construct a factory building, install equipment and machinery for sugar cane processing with a capacity of 1250 tonnes of cane per day (TCD) using state-of-the- art-technology, which will comprise of workshops, administrative offices, weighbridge house, cane yard, mill house, powerhouse, sugar house, effluent treatment and recycling plant, molasses tank, agricultural offices, bagasse silos, fuel station, other associated amenities and facilities on plot L.R. Transmara/Moita/761 in Lolgorian Ward, Enemasi Village, Moita Sub-location, Moita Location, Lolgorian Ward, Kereto Division, Transmara South Sub County, Narok County Transmara Sub-County, Narok County.

The following are the anticipated impacts and proposed mitigation measures:

Impacts Impacts	*Mitigation Measures*
Noise and vibration pollution	• Switching off machines while not in use. • Proper servicing of machines. • Regular servicing of working machines.
Traffic disruption	• Transport of construction materials should be scheduled for off-peak traffic hours. • Appropriate traffic warning signs, informing road users of a construction site entrance ahead and instructing them to reduce speed, should be placed along the main road in the vicinity of the entrance to the site during the construction period. • Flagmen should be employed to control traffic and assist construction vehicles as they enter and exit the project site. • Issue notices/advisories of pending traffic inconveniences and solicit tolerance by local residents before the commencement of construction works. • Assign traffic regulators to places during periods of chronic or potential traffic congestions. • Encourage transport vehicle owner to insure their vehicles on regular basis. • Discourage parking near the entrance or exit routes.
Soil erosion	• Stage site clearance works so as to minimize the area of exposed soil at any given time. • Re-cover exposed soils with grass and other ground cover as soon as possible. • Temporarily bund exposed soil and redirect flows from heavy runoff areas that threaten to erode or result in substantial turbid surface runoff to adjacent drainage waters. • Monitor areas of exposed soil during periods of heavy rainfall throughout the construction phase of the project to ensure that any incidents of erosion are quickly controlled. • Leveling of the project site to reduce run-off velocity and increase infiltration of storm water into the soil, therefore avoid compaction where possible.
Occupation health and safety of workers	• Provide workers with reflective garments. • Regular maintenance and safeguarding of working machines. • Train workers on manual handling techniques. • Deploy an expert to lead first aid administration. • Provision of adequate safety equipment and enforce on their usage. • Discourage trespass. • Erect signage on the ongoing activities. • Provide workers with personal protective equipment. • Provide implement safe systems and programs.
Solid waste generation	• Reduce wastes from the point of generation by purchasing high standard and recommended materials. • Instruct workers to avoid damage of working materials. • Contract NEMA registered garbage collector to collect waste on regular basis. • Embrace the 3R's concept (Reduce, Reuse and Recycle).
Biodiversity loss	• Once the project is completed, any bare land will be re-vegetated with indigenous grass, shrubs and trees. • Landscaping will be done to reduce any negative impacts. • Only specified areas of construction will have vegetation cleared. • protecting the existing individual trees as much as possible.
Cane spillage	• The proponent in partnership with Agriculture and Food Authority, Kenya Roads Board, KENHA, KURA, KERRA and the County Government of Narok will ensure the improvement of the road infrastructure within the cane growing area in order to reduce the level of cane spillage along the roads. • Sensitization of sugarcane loaders so as to allow for proper sugarcane loading avoiding protruding cane which inconvenience other road users. • The company should also institute measures of collecting all the spilled cane on the feeder roads.
Increased water use	• A Sustainable Water Management System Plan should be developed in collaboration with WRA to minimize impact to natural systems by managing water use, avoiding over-abstraction from the groundwater aquifers, and minimizing impacts to other water users. • Factory water use should be carefully monitored through the use of flow meters and timely identification and control of nay leakages. • The factory will be operated at optimum capacity and with minimum stoppages because raw water consumption per ton of cane crushed increases when crushing lower than the optimum capacity and when hot water production is suspended during halts in operations (cleaning, restocking, and breakdowns).
Liquid waste generation	• Wherever possible, containment of water collected from areas with potential contaminants will be ensured. Such waste water should be reused. • Oil interceptors and sediment traps should be installed and maintained to ensure any discharge to the environment carries a low sediment load. • Storm water management canals and dams should be maintained and kept clean in order to ensure that the capacity of such systems is not compromised during the life of the operations. • Sensitization of the clients who buy molasses of the environmental effects of the product so as to prevent spillage of the same. • Apply for effluent discharge license from NEMA on time. • Install a water meter to measure the amount of water waste water released from the factory on daily basis. • Carry out an analysis of the composition of the effluent through a NEMA registered laboratory.

Impacts Impacts	*Mitigation Measures*
	• Continuously monitor the discharge as per the regulations.
Solid waste generation/By-products (bagasse, filter cake, boiler ash)	• Clearly designate and construct an appropriate waste collection facility or provide covered refuse skips; (Designate Filter cake and boiler ash dumping and composting sites).
	• Provide NEMA licensed waste transport vehicles.
	• Maintain a proper waste tracking document.
	• Bagasse to be used as a source of fuel in the boilers in addition to being used to future plans of cogeneration.
	• Ensure adequate fire warning, response and management systems are installed.
	• Ensure prescribed regular medical examination of workers exposed to bagasse.
Air pollution	• Sprinkle water to harness dust level.
	• Provide workers with dust masks.
	• Monitor stack emissions regularly.
	• Have Fugitive Emissions Control Plan.
	• Install appropriate Electrostatic precipitator (ESP) as an effective emissions control technology.
	• Ensure the emissions are within permissible limits in line with Air Quality Regulations 2014.
	• Apply for Emission license and undertake quarterly analysis to ensure compliance with the emission standards.
	• Do regular air quality monitoring (AQM) in the prescribed intervals.
Fire Outbreak	• The proponent will encourage green cane harvesting to avoid the negative Environmental impacts associated with can harvesting through burning.
	• Install and regularly maintain firefighting equipment.
	• Clearly labeling fire exit routes.
	• Constitute a firefighting team.
	• Staff to be made clearly aware of fire hazards.

THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(*No.* 8 *of* 1999)

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED GOLD ORE MINING AND PROCESSING PLANT ON PLOT L. R. NO. KABUOCH/ KAGURIA/ KAMENYA/KOGUTA/ 708 AND KABUOCH/K/K/KOGUTA/2197 IN KABUOCH SOUTH PALA WARD, KOGUTA SUB-LOCATION, PALA LOCATION, NDHIWA SUB-COUNTY, HOMABAY COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to section 59 of the Environmental Management and Co-ordination Act, 1999, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Spirit Mining Kenya Limited, proposes to undertake gold ore mining and processing. There two main methods of extraction of the gold ore from the ground; Surface mining/open pit mining which is suitable for shallow lying deposits and underground mining which is most suited for steeply dipping and narrow deposits. The processing site will consist of gold room/smelting furnace, CIL system, elution plant, fire assay laboratory, office and workshop block, water storage and supply system, latrines, light fuel storage facility, tailings/sludge dam among other associated facilities on plot L.R. No. Kabuoch/Kaguria/Kamenya/Koguta/708 and Kabuoch/K/K/Koguta/2197 in Kabuoch South Pala Ward, Koguta Sub-location, Pala Location, Ndhiwa Sub-county, Homabay County.

The following are the anticipated impacts and proposed mitigation measures:

Impact	*Mitigation Measures*
Loss of biodiversity	• Strictly control movement of vehicles and mining works to ensure that they operate judiciously and over designated areas to minimize destruction of vegetation.
	• Re-establish vegetation in some parts of the disturbed areas through implementation of a well-designed landscaping programme by planting of appropriate plants.
Risk of oil spillage	• The proponent shall take into account safety procedures to minimise cases of oil spillage. Such procedures might include maintaining the machinery in specific designated areas designed for such purposes.
	• Construct an oil interceptor at the machine and equipment service station to separate oil and wastewater before the wastewater joins the natural drainages.
Noise and vibrations	• The proponent shall properly maintain the equipment and machinery and restriction of construction activities to daylight hours.
	• Providing ear protective devices to workers and visitors in noisy environments to prevent high frequency noise emitted by the high frequency machines.
	• Schedule noisy activities during daytime hours when they are less likely to disturb nearby residents. Implement quiet periods during the night.
	• Use controlled blasting techniques such as pre-splitting, cushion blasting, and electronic detonators to minimize noise. Conduct blasting at fixed times with prior notification to local communities.

Impact	*Mitigation Measures*
Dust emissions	• The contractor on site should utilize dust suppressors (water sprays), cover the trucks carrying tailings and sand with canvass, and pre-start inspection of dust control equipment should be undertaken. • Provide construction workers with Personal Protective Equipment (PPE) such as dust masks. • Adopt the wet crushing technology to minimize amount of dust generated during crushing of tailings and rock ore. • Sprinkling water during dry season on the road to the mining site to suppress dust.
Risk of mining work accidents	• Mining workers must be provided with appropriate personal protective gears, especially while working in risky conditions. • Drivers transporting rock ore and other materials to the site should be advised on the speed limit to minimize risk of accidents on the local roads. • There will be no tolerance for drunkenness or intoxication during working hours, and no alcohol will be permitted at the project site. • Underground mining and ore processing works to be undertaken by qualified and experienced experts. • Dangerous working areas such as mining and ore processing sites will be protected, fenced, demarcated and cordoned off from the general public.
Generation of solid and liquid waste	• The contractor must put in place proper waste management mechanism for solid and liquid wastes disposal. • Toilet and/latrine should be provided on site and the necessary sanitary arrangements made. • Food left overs and waste paper will also generate solid waste which must be separated and be disposed at designated sites.
Conflicts	• Spirit Mining LTD should put in place a pre-emptive community liaison structure aimed at identifying potential issues arising from project-related impacts and addressing them before they become grievances, • The company should also have mechanisms of escalating grievances to relevant mandated agencies in case the grievances cannot be handle at the community level. • The company should put a barrier between the existing electric fence and the public road/ homesteads to prevent electric shocks at night to area residents and animals.
Landform and geological change, soil erosion, quality deterioration	• Implement phased mining to minimize the area disturbed at any one time. • Use techniques such as terracing, retaining walls, and geo-fabrics to stabilize disturbed areas and reduce landform changes. • Soil conservation measures would be taken to the stockpiles to prevent erosion. This can include the use of erosion control fabric. • Design and implement effective drainage systems to manage surface water and prevent erosion.
Fire risk	• Places with flammable materials should be declared "NO SMOKING ZONES" and clear notices of the same be displayed. • Fire extinguishers should be installed at strategic locations within and outside specific rooms such as light fuel storage area, offices and in areas where food is prepared. • "FIRE ASSEMBLY POINTS" at specific points at the site should be established and marked. • The company should on regular basis train personnel concerning emergencies including those involving fire out-breaks. • Spirit Mining limited should facilitate regular inspection of the fire fighting equipment.
Risk associated with transportation, handling and storage of mining chemicals and explosive	• Obtain a license for transporting hazardous materials from NEMA, ensuring that the vehicle used for transportation is certified for carrying hazardous chemicals including proper labelling and safety features. In the event of an accident or spill, immediately report to NEMA and other relevant authorities. • Ensure that hazardous chemicals are packaged in containers that are leak-proof and resistant to the chemicals being transported. • Ensure that Safety Data Sheets (SDS) for all hazardous chemicals are available and accessible. SDS provide detailed information on handling, storage, and emergency measures. • Have a qualified person to handle the storage and monitor usage of hazardous chemicals and explosives at the company's site. No unauthorized persons should be allowed into the storage room or to use the chemicals.
Risks associated with blasting	• Conduct thorough geological surveys to understand the rock structure and potential hazards. • Establish safety zones and ensure all personnel are clear of the blast area. • Those working in the mine should use PPEs and mats to contain flyrock, dust and noise. Ensure proper handling, storage, and disposal of explosives. • All loading and firing shall be directed and supervised by competent person(s) thoroughly experienced in this field and accredited accordingly. • Inform local communities about blasting schedules and potential impacts prior to blasting. • Adhere to local regulations and industry standards for blasting operations (Explosives Act of Kenya, 2012).

Impact	*Mitigation Measures*
Ground and surface water quality pollution	• Conduct a hydrogeological assessment to guarantee that drilling and blasting operations do not disrupt the water table. • Construct containment systems such as double-lined tailings ponds and leach pads to prevent cyanide leakage into the soil and groundwater. Use high-density polyethylene (HDPE) liners for additional protection. • Ensure proper handling and mixing of cyanide solutions to minimize spills and exposure. • Implement cyanide recycling systems to reduce the amount of cyanide used and disposed of, minimizing the risk of leakage. • Regularly monitor groundwater and surface water quality around the mine site for cyanide levels. The comparison should be based on baseline data before mining operations. • Equip the site with cyanide spill containment and neutralization materials, such as spill kits and neutralizing agents (e.g., sodium hypochlorite or hydrogen peroxide). • Emergency dam should be constructed at the project site based on the slope of the area to collect water that might overflow from the tailing dam during flooding.
Effects of cyanide vapours from leach tanks	• Processing environment should be maintained in basic condition to avoid evolvement of HCN gas which is poisonous, to achieve this, the plant should use lime to suppress cyanide from being emitted as a fume into the environment. • Install and maintain effective ventilation systems in areas where cyanide is used to disperse and dilute HCN fumes. • Utilize closed systems for cyanide processing to minimize the release of fumes into the workplace. • Train workers on the safe handling of cyanide, recognizing the signs of HCN exposure, and emergency response procedures. • Equip workers with protective clothing, gloves, respirators and goggles to prevent skin and eye contact with cyanide solutions and fumes.
Increased traffic	• Sensitize the drivers to control and reduce speed of vehicles on the road. • Expand and rehabilitate the local access roads to be used by the trucks.
