The 1999 Population & Housing Census

Counting Our People for Development

VOLUME I

This volume presents Population Distribution by Administrative Areas, Age and Sex

JANUARY 2001

The 1999 Population and Housing Census was carried out under the provisions of the Statistics Act (Cap. 112) and Legal Notice No. 121 of 11th September 1998 and amendment No.25 of 22nd February 1999. It was the fourth census to be carried out since Independence and the sixth since 1948 when the first census was conducted in Kenya.

The main objective of this census was to collect demographic and socio-economic data required for development planning and policy formulation. It was, therefore important that data collected be comprehensive, complete and accurate both in terms of coverage and quality.

The planning and preparations of various census activities started in 1996 after Cabinet's approval. The exercise entailed the mapping of the entire country to ascertain administrative and socio-economic changes that had occurred since 1989; the mounting of a vigorous publicity and advocacy campaign to sensitize all stakeholders and setting up of various committees to guarantee participation and ownership of the exercise. **H.E. The President** launched the census, the theme of which was: *Counting Our People for Development.*

The enumeration was successfully carried out between the night of 24th/25th and 31st August 1999. Most of the population was covered within the first 4 days. A total of 28,686,607 people were enumerated, reflecting a 34% increase over the 1989 census. Of these, 14,205,589 were males and 14,481,018 females.

We extend our profound gratitude to all our development partners who collaborated and supported us in different forms throughout the entire census exercise. Forms of support received from development partners were either financial, material and/or technical assistance. Our thanks go to various census committees: the National Census Steering Committee; the District Census Committees; and the Census Technical Committees, who worked tirelessly during the preparatory stages for the completion of the exercise.

All Kenyans deserve special thanks for their patience and willingness to provide the requisite information. It is our sincere hope that in this *"information age"* the data contained in this volume and subsequent analytical volumes, will be fully utilised by all stakeholders for effective planning and policy formulation for the welfare of our people.

FOREWORD

The 1999 Population and Housing Census was originally planned to be announced in July 2000. That date was later adjusted to October and December 2000 to ensure data quality. The cleaning and processing of the data was completed in January, 2001. Being the last census in the 2nd millennium and the base for the 3rd millennium, the data set contained in this census report will provide the crucial information required for informed decision making in national planning and policy formulation.

When launching the census **H.E. The President** appealed to all Kenyans to avail themselves for the enumeration and provide complete and accurate information. The theme of which was ***Counting Our People for Development.***

With globalisation and advances in information technology, the 1999 census provides a wealth of information for development planning and policy formulation. Data on population, administrative boundaries, population density, age and sex structure, education attainment levels, total labour force, employment and unemployment statistics and the housing status of our people among other variables, are key to social and economic planning.

This census departs from the previous ones in that it adopted and used new technology. The modern technology included Scanners, Geographic Information System (GIS), and Local Area Network (LAN). A rich data base has been created, backed with modern tools like GIS. These will lay the foundation of collaboration with other organisations in improving planning, policy formulation, monitoring, and evaluation. In particular, it will be possible to combine geographic information with statistical information on a range of areas including social and other forms of statistics.

Successful and effective utilisation of the data availed by this census will require a deliberate shift towards information sharing as well as the application and use of modern information technology together with the adoption of a culture of evidence-based decisions. Government departments, public, private, local and international research organisations will have an opportunity of improving their planning and policy formulation based on these census data. I am confident that data contained in the census basic reports will provide ground for better planning, policy formulation, monitoring and evaluation.

Hon. Gideon M. Ndambuki, EGH, M
MINISTER FOR PLANNI

11. CONCLUSION xxxii

. BACKGROUND AND BASIC RESULTS

.1 INTRODUCTION

The 1999 Population and Housing Census, hereinafter referred to as the 1999 Census, was the sixth census to be carried out since 1948 and the fourth since independence. It was carried out between the night of 24th /25th and 31st August 1999.

This Census was carried out under the provision of the Statistics Act (Chapter 112) of the Laws of Kenya. Legal Notice No. 121 dated 11th September 1998 and amendment No. 25 of 22nd February 1999, were gazetted to facilitate the planning and execution of the census. According to the Legal Notice, all persons who were in Kenya on the Census Night (24th/25th August) were legally bound to allow census officials access to their households and premises and provide them with the requisite information. Census officials took the Oath of Secrecy which guaranteed the confidentiality of the information collected from individuals. It was a legal offence to divulge census information to unauthorised persons. The Notice also highlighted the questions which respondents were expected to answer.

.2 OBJECTIVES

The main objective of this census was to ascertain the country's population size by enumerating all persons (whether citizens or not) who were within the borders of Kenya on the mid-night of 24th/25th August 1999. The specific objectives were to collect data on:

- Composition and spatial distribution of the population;
- Levels of education attained by the population;
- Levels of fertility, mortality and migration rates;
- Rate and pattern of urbanisation;
- Size and utilisation of the labour force; and
- Housing conditions and availability of social amenities.

2. CENSUS ORGANISATION AND ADMINISTRATION

The 1999 Census was undertaken at the time when diverse demographic and socio-economic data were required to ascertain the achievements made since independence and the way forward to address current challenges and those envisaged during the 3rd millennium. This commitment necessitated the

establishment of an elaborate census organisation and administration to guarantee the collection of comprehensive, accurate and complete information.

The Minister for Planning was responsible for all policy and administrative arrangements. He was assisted by the Permanent Secretary and the Director of Statistics who was gazetted as the National Census Co-ordinator. The Provincial Commissioner of Nairobi was appointed the National Census Officer and chairman of the National Census Steering Committee to oversee the implementation of all activities. A Project Manager and Publicity/Advocacy Officer were also recruited to provide technical backstopping.

A Census Secretariat (Technical Committee) was established to provide professional and technical support by designing all census instruments; preparing training manuals, maps and budgets; arranging transport logistics; training of trainers and overseeing the implementation of all census activities.

3. PREPARATORY ACTIVITES

3.1 CARTOGRAPHIC MAPPING

Mapping of the country was one of the key activities which were undertaken to facilitate the enumeration exercise. The exercise entailed traversing the entire country to gather data which was used to delineate the Enumeration Areas (EAs). The EA maps facilitated easy identification of the areas assigned to enumerators during enumeration. The EAs also assisted in avoiding problems of duplication and omission. Specifically, the maps assisted an enumerator to accomplish the following tasks:

- Determine the precise boundaries of his/her EA.
- Plan the best route of travel in order to canvass every part of the EA systematically.
- Mark the location of the structures earmarked for call-backs.

Besides the above uses, it was from the mapping exercise that anticipated workload was assessed and resources requirements determined. These included determination of the number of enumerators, supervisors, questionnaires, vehicles, drivers etc. required to undertake the census. The exercise made it easy for the census organisation to provide results for all administrative areas up to the sub location level.

The exercise took into account the changes which had occurred since 1989 census pertaining to the country's administrative structure, socio-economic development and demographic profiles. It was of paramount importance that these changes be taken into account when delineating Enumeration Areas.

Training of Personnel

The 1999 census utilised in-house cartographic staff and personnel seconded by the departments of Survey of Kenya and Resource Surveys and Remote Sensing. The staff were trained in computer assisted cartography particularly in Geographical Information System (GIS) principles and applications. The Regional Centre for Mapping, Surveying and Remote Sensing was approached to mount an introductory course for eight middle cadre staff. Two classes of four officers were conducted in 1997 and 1998. Each training lasted a period of four months. Besides this training the Census Secretariat had earlier gone through in-house training workshops to review some mapping principles prior to the commencement of mapping work in 1996. United Nations Population Fund (UNFPA) availed two consultants who assisted in mounting on-job training of personnel in GIS technology.

2 Procurement of Equipment and other Supplies

An assessment of the equipment and materials needed to successfully undertake the mapping and data capture exercises was carried out in 1996. A list of required equipment and materials was prepared. The UNFPA undertook to provide most of the non-expendable and expendable equipment and materials for the computer assisted cartography. The Fund also procured twenty 4-wheel drive vehicles and 20 computers. The Government undertook to provide personnel, general stationery and other services like the preparation of the GIS laboratory.

.1.3 Preparation of Base Maps

The 1989 Census EA maps and topographic maps purchased from the Survey of Kenya were used as base maps. However, given the numerous demographic and socio-economic changes that had taken place since 1989, it was found necessary to carry out fieldwork to bring on board all the changes.

3.1.4 Field Work

Cartographic field work for the 1999 Census started in 1996. Unlike the 1989 census, where training for the preparatory activities was mounted separately, the various stakeholders had a chance to be informed about the importance of preparatory activities during workshops held in each district to disseminate the results of the 1989 Census. Meetings were held with provincial administration officials at all levels to solicit their involvement in the exercise.

Mapping teams were set up comprising of three officers, a team leader and two mapping assistants. Each mapping team was assigned specific districts. More

experienced officers were appointed as co-ordinators of different teams. Each co-ordinator was in-charge of at least two mapping teams. It was the responsibility of the co-ordinator with the assistance of the team leader to ensure that all the areas in the district were accurately mapped and that the necessary documentation pertaining to the mapping activities were done while the team was on the ground.

3.1.5 Up-Dating Base Maps and Delineation of Enumeration Areas

As mentioned earlier, the 1989 Census maps were used as base maps. Due to differences in population densities various scales were used to prepare Enumeration Area maps. The common ones were 1: 10000, 1: 12500, and 1: 20000 in rural areas whereas 1: 2500, and 1: 5000 were used in urban areas.

Ideally an Enumeration Area in the 1999 Census was expected to contain 100 households. However, EA sizes differed from one area to another depending on population density. For example, in the Arid and Semi-Arid areas fewer households were used to delineate EAs due to the sparse distribution of the population. At no time was an EA allowed to cross a village or sub location boundary.

The mapping teams used identifiable features like roads, rivers, footpaths, etc. to delineate EA boundaries. Where imaginary boundaries were inevitable, names of household heads on either side of the boundary were indicated. In cases where it was not possible to create EAs as per the 100 household rule, composite EAs were allowed and recommendations made as to the number of Enumerators to be assigned to such EAs during enumeration. For purposes of the 1999 Census, the boundaries of city councils, municipal councils, and urban councils together with District headquarters, towns and trading centres were all treated as urban.

The mapping procedure used in the urban areas included updating the base maps, listing of buildings and or quick counting of households to determine the number of households and accordingly delineate EAs on the urban base maps. All buildings were plotted on the base maps. Each building was assigned a number which was written on the base map for purposes of identification of the EA during enumeration. This is the second time this method has been used in the mapping of urban areas.

Though the boundaries of the various local authorities are defined by the Ministry of Local Government and generally encompass one or more sub-locations within the areas of their jurisdiction, some urban centres included areas that were rural in terms of socio-economic characteristics. Hence, in delineating EAs in the urban areas, the urban core was assigned a unique code. The other areas that were rural in character within the urban centres'

boundaries were assigned a separate code. For the first time a new code was introduced to take care of areas that are on the periphery of given towns but urban in character. During the updating and delineation of the urban areas on base maps each sub-location was divided into blocks using identifiable features like streets, roads, rivers, and railway lines. Slums were treated separately from the planned areas. While carrying out the numbering of buildings and listing of households, the purpose to which each building was put was noted. This information assisted in the identification of dwelling units and households and hence the determination of the number of EAs to be created using the 100 household rule.

Field mapping in Arid and Semi-Arid areas was carried out in August/September 1998. It was done under the assumption that the following year the population mapped in a particular area would return to the same place due to the migratory nature of the population. The effect of this assumption may have been affected by the 1999 drought.

All national parks, reserves, and forest areas were treated as sub-locations, locations, or divisions depending on their size. Collective households like schools, army camps, police lines, hospitals etc were treated as special EAs. All EAs in each sub-location were systematically numbered as 0011, 0021, 0031 etc beginning at the north-west or the north-east moving in the clockwise direction. A total of 61,922 EAs were delineated during the mapping exercise.

3.1.6 Production of EA Maps

Due to lack of sufficient time to have all the EA maps digitised, some 43 districts had their EA maps drawn using conventional cartography (manual drafting). This required hiring of extra staff alongside those that were seconded to the project from other departments.

3.1.7 Ground Verification

Ideally, all the EA maps required to be verified prior to the printing of the final field copies. This was not done due to lack of time and resources.

3.1.8 Printing and Dispatch of Maps

The printing of the maps was carried out between July and August 1999. The maps were dispatched to the districts before enumeration.

3.1.9 Area Measurement

Though the EA maps for 43 out of 69 districts were manually drawn, all sub location boundaries were digitised and hence unlike the previous censuses, the area measurements were calculated digitally. This method made it easy to exclude the water surfaces. It is more accurate than the manual one. The areas shown in Table 1 relate to land surface only, hence it is less than total land and water surface area.

3.2 DESIGN OF CENSUS INSTRUMENTS

Census instruments, in this case, refer to questionnaires, training manuals and control forms. Two types of questionnaires were used, namely the main questionnaire and short questionnaires. The main questionnaire was used to enumerate populations in conventional households and institutions like schools, colleges and military barracks. Three different short questionnaires were used: one for people found in hotels, refugee camps, hospitals (in-patients only) and prisons or police cells; another for travelers or persons in transit and; the last for vagrants and outdoor sleepers.

Development of the questionnaires and the training manuals was a process that enlisted the participation of all stakeholders at different levels. These instruments were originally drafted by the Census Secretariat and then improved upon with the technical assistance of United Nations Population Fund personnel from Country Support Team (CST), Department for International Development (DFID) and United States Agency for International Development (USAID) consultants. The original drafts incorporated lessons learnt during the 1989 Census. The instruments underwent several revisions during workshops which brought together a variety of stakeholders including subject matter specialists. The final review of the instruments was done after the conclusion of the pilot census.

One of the key considerations in designing the census questionnaire was to make it as short as possible by including only questions which could elicit key demographic and socio-economic data on the Kenyan population. The questions included in the main questionnaire related to those eliciting background information on all persons i.e. Name, Relationship, Sex, Age, Tribe or Nationality, Religion, Marital Status, Birth Place, Previous Residence, Duration of Residence and Orphanhood; Education; Labour Force; particulars of All Live Births; particulars of Last Live Birth and Housing Conditions and Amenities. All the answers were pre-coded to enhance uniformity and comparability of results between different geographical areas as well as to forestall coding complications during data processing.

PILOT CENSUS

A pilot census was conducted in September 1998 to pre-test the census instruments, the usefulness of EA maps, and the administrative and logistical arrangements, with a view to improving overall census planning. Two sub-locations were covered in each of the selected 16 districts namely: Kilifi and Kwale in Coast Province; Nyandarua and Nyeri in Central Province; Meru North and Makueni in Eastern Province; Turkana, Trans Nzoia, Baringo and Narok in Rift Valley Province; Siaya (including Bondo) and Nyamira in Nyanza Province; Wajir in North-Eastern Province; Busia and Bungoma in Western Province and; Nairobi. The districts were chosen purposively, taking into account the fact that regional differentials in socio-economic achievements and cultural practices might have resulted in different perceptions regarding the sensitivity of certain questions and consequently changed them or the manner in which they were asked in order to forestall mis-statement or non-response.

The following lessons were learnt during the pilot exercise:

- Publicity and advocacy through dissemination workshops and sensitisation seminars helped prepare the public well ahead of the pilot enumeration and enlisted considerable support for the exercise.
- The allowances planned to be paid out to various cadres of personnel engaged for the exercise were satisfactory. However, most of the personnel expressed fears that payments would not be availed on time.
- Prior security arrangements in collaboration with the Provincial Administration enhanced access to the insecurity prone areas and thus ensured the success of the exercise in such areas.
- EA maps were found very useful but needed to incorporate more physical features or landmarks to improve their usefulness.
- Inadequate transport hampered effective co-ordination and supervision of activities, particularly enumeration in certain areas.
- The high calibre of enumerators required was not available everywhere. Arrangements were made to recruit less qualified ones in the affected areas but train them for a slightly longer period.
- Deployment of enumerators in their local areas lowered costs and enhanced quality of data due to the respondents' confidence in them.
- About 3 days were sufficient to complete the enumeration of the population in most areas. However, adverse weather conditions and difficult terrain made canvassing difficult and/or slower in some areas. The enumeration of mobile populations required more days due to numerous call-backs. Overall, 7 days were sufficient to enumerate the population.

- Disbursement of census funds through A.I.Es to districts with limited revenue base bogged down the timely implementation of certain activities. Disbursement through cheques was more expedient.

These lessons were adequately utilised in finalising the arrangements for the enumeration exercise.

3.4 RECRUITMENT OF FIELD PERSONNEL

Field personnel were classified into 6 main categories namely: Co-ordinators, Trainers, Senior Supervisors, Supervisors, Enumerators and Village Elders. The **Co-ordinators** were essentially Senior CBS staff who had played a key role in the planning of the census. The national **Trainers** were subject matter specialists in their own right with considerable knowledge in social research and were from the public sector, private sector, NGOs, and Universities. The **Senior Supervisors** were mainly secondary School Head Teachers or Principals of colleges, District Heads of Departments or their equivalent, with good administrative, communication, supervision and training skills. These were recruited at District level but deployed within the division in which they resided. They were in charge of about 4 supervisors. The **Supervisors** were school teachers at any level or graduates or civil servants or any other persons with good administrative, communication, training and supervision skills. They were recruited at Divisional level but deployed in the sub-locations in which they worked or resided. They were in charge of about 10 enumerators. The enumerators were mature and responsible citizens of good character with a minimum grade of D+ in KCSE or Division III in KCE.

The recruitment of trainers was done by the Census Secretariat while that of senior supervisors, supervisors and enumerators was done at respective levels by sub-committees set-up within the District Census Committees comprising of the District Statistics Officer, District Personnel Officer, and representatives of Provincial Administration, and political and religious leaders.

3.5 TRAINING OF FIELD PERSONNEL

Training of field personnel was handled at different levels. The regional co-ordinators and national trainers were trained at the headquarters for 5 days by the Census Secretariat/Technical Committee. Upon successful completion of their training, they were deployed at various provincial or sub-provincial headquarters in teams of 3 to 5 to train senior supervisors for 5-7 days while being monitored closely by members of the Census Secretariat. The senior supervisors proceeded to train supervisors at the respective district headquarters for 5-7 days, under close supervision of trainers and occasional visits by members of the Census Secretariat. Upon completion of their

training. The supervisors proceeded to train enumerators at their respective locational headquarters, with supervision of the senior supervisors covered by occasional visits by co-ordinators and members of the Census Secretariat.

Training of senior supervisors and supervisors emphasised both knowledge of the contents of the data collection instruments and the administrative and supervisory roles they were to play. However, training of enumerators was emphatic on knowledge of the data collection instruments and the versatility with which they could be administered, particularly with respect to the manner of asking questions and how to approach respondents appropriately. Practical sessions involving identification of EAs and administration of the questionnaire were compulsory, as well as finding the best interpretation of the questions in the local vernacular. All field personnel took **Oath of Secrecy** under the **Statistics Act** at the end of each training stage to ensure confidentiality of the information collected.

3.6 PUBLICITY/ADVOCACY CAMPAIGN

The main objective of the 1999 Census Advocacy/Publicity campaign was to sensitise and mobilise Kenyans, to support and own the census as well as to rebuild public confidence in the exercise. The first step towards achieving this objective, was to address the shortcomings of the previous censuses which had been identified as:

- Non-involvement of stakeholders in the exercise.
- Inadequate publicity/advocacy to ensure that the public was adequately informed and sensitised.
- Delay in the publication of the 1989 census results.

3.6.1 Publicity/Advocacy

One of the main vehicles used to achieve the above objective was the mass media. Through well co-ordinated use of the print and electronic media, a sizeable proportion of the Kenyan population especially those residing in urban areas was reached. This was achieved through focused press conferences, press releases, workshops with the media, coverage of census activities and media announcements. For the majority of Kenyans with no access to either print or electronic media, a concerted advocacy campaign of sensitising key influence groups and enlisting their support in passing on the messages down to the grassroots level was carried out.

These main influence groups were identified as:

- Provincial Administration
- Educational institutions
- Women groups

- Trade Unions
- Politicians
- Religious organisations
- Non-Governmental Organisations
- Media

To equip the influence groups with skills for passing down census messages, advocacy seminars were first conducted for Provincial Commissioners and District Commissioners to sensitise them on the importance of the census and their respective roles in the advocacy campaign. Similar seminars were also held at the district level, where participants drawn from all the above stakeholders were sensitised on the advocacy campaign and their role in its success.

3.6.2 Census Committees

A National Census Steering Committee comprising of all stakeholders was constituted vide Legal Notice No. 121 of 11th September 1998 and subsequent revision No. 25 of 22nd February 1999. This committee was mandated to advise and guide the Census Secretariat as well as oversee the implementation all census activities.

District Census Committees comprising all stakeholders were established in all districts to ensure ownership of the census activities in the respective districts.

Specific sub-committees were formed to deal with advocacy/publicity matters at the district level. These sub-committees comprised the District Committee members who were in constant and direct communication with the public such as religious leaders, teachers and chiefs. Their role was to design and implement advocacy/publicity strategies suitable to their districts as well as distribute advocacy materials

Endorsement by the above groups went a long way in creating confidence in the exercise. They were also very effective in sensitising their members/congregations on the census.

An Advocacy document was prepared to guide those who were involved in the publicity/advocacy campaigns. Census fliers and posters were prepared and distributed. The fliers and posters highlighted the importance of the Census Night (24th/25th August 1999) as a reference point, planned duration of enumeration and what was expected from the public during the enumeration.

H.E. The President officially launched the census a week before the enumeration. The launch enhanced publicity/advocacy activities that had already been started and gave credibility to the exercise. The launch also presented an excellent opportunity for enlisting the support of all stakeholders as well as the public. H.E. The President appealed to the public to avail themselves to be enumerated and to provide complete and accurate information to the census personnel.

ENUMERATION

The 1999 Census enumeration adopted a *de facto* approach whereby everybody who was within the country was enumerated according to where she/he had spent the Census Night (24/25th August 1999). The population was sub-divided into four categories to ensure total coverage. The categories were:-

- Conventional household population which included persons who spent the Census Night in private (ordinary) households.
- Institutional population which included persons who had spent the census night in institutions like hospitals (in-patients), schools/colleges, barracks, prisons etc.
- Outdoor sleepers (vagrants) which included all persons who had slept in outdoor locations like parks, streets, market places etc.
- Travellers which included persons who were on transit (travelling) on the census night either by Air, Road, Rail and Water.

Persons in the conventional households were enumerated as planned during the seven days after the census night. Other categories of the population were enumerated on the census night. The exercise went on well. To ensure that all persons were enumerated, an appeal was sent out to those persons who had not been enumerated after the seventh day to report to the nearest administrative centre to be enumerated. The appeal was well received and those who had not been enumerated came forward.

Supervisors and senior supervisors worked closely with the enumerators to ensure that few or no mistakes were made. After enumeration, the census personnel completed summary sheets at each administrative level i.e. EA, sub-location, location, division and district. This helped in accounting for all persons who had been enumerated at each level. The summary sheets were used in computing provisional results which were released in February, 2000.

Unlike the previous censuses, the public was properly sensitised on the census enumeration methodology. Despite this, a few difficulties were encountered in

some districts. For example, some ethnic groups demanded that their ethnic groups be included on the code list for unique identification. The enumeration exercise was slow in urban areas because people went on with their daily business during the day forcing the enumeration to be done in the evenings.

During training and enumeration period a *surveillance and complaint office* was set-up at the Census Offices in Nyayo House, Nairobi to respond to all enquiries regarding the exercise. Hotline telephone and fax numbers were given to the public. The office was operational 24 hours.

5. RECEIPT AND EDITING OF QUESTIONNAIRES

The census questionnaires were received at the Census Office from respective districts by the Census Secretariat starting from September 22nd 1999. At this stage, the verification of district summaries was done by checking on the summary totals provided by the District Census Officers. The exercise involved computerisation of the district summaries at EA level and comparing them with those contained in the summary control forms from each district. This exercise was completed in January 2000.

Over 800 data entry and editing clerks were recruited and trained in the first two weeks of January 2000. They started working from mid-January 2000. The editing exercise covered verification of geo-codes, confirmation of the household totals for conventional households, consistency checks on relationship and sex variables, and reinforcement of codes to facilitate the scanning process afterwards.

6. POST ENUMERATION SURVEY

A Post Enumeration Survey (PES) was conducted in February, 2000 in 530 EAs countrywide. The main objective of the survey was to provide estimates of coverage and content errors at urban, rural and provincial levels.

During the design of the PES, only few variables of those contained in the main census were selected. The variables were: name, sex, relationship to the household head, age, marital status, religion, level of education reached and number of children born to females aged 12 years and above. The variables were included in the PES because they are not likely to change significantly within a short time and constitute a core of the data collected in censuses. Processing of the data collected in this survey is underway. The results will be utilised in subsequent detailed analysis of the census data and in particular making future projections.

7. DATA PROCESSING

The capturing of the data collected in the 1999 Census was undertaken by scanning technology using the equipment referred to in Section 3.1.2. Besides the equipments, DFID provided Technical Assistance by procuring services of an expert on programming, systems analysis and data processing. UNFPA also provided Technical Assistance in Management Information System, especially a specialist on data processing and population statistics. The data processing exercise thus involved the following six stages.

7.1 INPUT

This stage involved scanning the questionnaires to obtain clear images of the fields where data was contained. The images so obtained were sent to the next stage for further processing.

Two types of scanners were used: one of which was capable of scanning 160 double sided questionnaires per minute while the other was capable of scanning 80 double sided questionnaires per minute. Two of each of the above types of scanners were utilised.

7.2 PROCESSING

The processing stage constituted the brain of the system. The system looked at each image and either accepted or rejected it. The image could only be rejected if it did not match the EFI (Empty Form Image) that was input during the system design. Hence all questionnaire forms had to be similar to the EFI before they could be accepted.

Once a form was accepted by the system, the processing software (hereafter referred to as Engines) would proceed to read the characters and recognise them if possible. The system attained an average recognition rate of 98 percent, leaving a mere 2 percent to be completed in the next stage.

7.3 COMPLETION

All the un-recognised characters were sent to this stage for the data entry clerks to complete. Occasionally the clerks were also not able to complete the whole questionnaire. The clerks were advised to send these cases to the next stage for further action. An average of 95,000 questionnaires per day were completed, with the highest being over 140,000 questionnaires per day.

7.4 EXCEPTION

Questionnaires that could not go through the completion stage were sent to this stage. Original questionnaires were brought in from the storage and checked against the entries that were not completed. If the value was out of range, the demographers were consulted and the entry completed as per their advice. Less than 0.05 percent of the questionnaires passed through this process and quite often, only one or two entries in a batch of 100 questionnaires had to be completed at this stage.

7.5 ARCHIVE

This was the final stage in the scanning process. At this stage a final data file was produced ready for further analysis. This process could happen immediately after the processing stage if all the questionnaires were recognised without any fields being rejected. It could also happen after completion and/or exception stages.

7.6 DATA CLEANING AND VALIDATION

The cleaning of the data entailed the following verification activities:

- Verification of the geo-codes
- Verification of the household numbers
- Verification of the serial numbers for each record
- Looking for and removing duplicates
- Removing blank records
- Merging the data files to form complete geographical areas

The validation exercise entailed a comparison of scanned and manual b derived data at the EA level on three variables: number of households, numbe of males and females with manual counts for conventional households. Whenever any discrepancy beyond 5 percent was detected, a thorough check was mounted and the error corrected.

Further verification was undertaken using consistency checks as earlier mentioned. This process assisted in identifying inconsistent data at the individual level. The major variables utilised were sex, age, migration status and fertility. Minimal imputation was implemented on these key variables.

The aggregation of the data was undertaken starting from the EA level to national levels after the validation exercise. This process was vital before the data was made ready for tabulation and analysis. The details on each of the

above activities and the challenges faced are scheduled to be contained in a methodology report of the census.

8. LESSONS LEARNED

The 1999 Census was the first census to be undertaken with full participation of all stakeholders. Unlike previous censuses, various advocacy/publicity campaigns were carried out in preparation for the main enumeration. The campaigns managed to educate the public and other stakeholders on the usefulness of the census data in development planning, hence the census theme "*Counting Our People for Development*".

The mobilisation of resources for the exercise posed diverse challenges; it was undertaken at a time when the economy was undergoing a recession. The Government was able to raise most of the funds which facilitated the successful implementation of various census activities. Financial constraints could have been minimised if the development partners and the private sector had been on board right from the beginning, particularly during the planning stages.

The use of scanning technology for data capture posed major challenges as there was insufficient exposure prior to the use of technology. The technology had never been used in censuses carried out in Sub-Sahara Africa. The software was tested using a sample of questionnaires collected in the Pilot Census. The biggest challenge was that besides the scanner other pieces of special equipment were needed. The software also required experienced personnel at all stages of processing. This was not done hence posing major difficulties. Although two senior data processing officers were sent to Israel for training in the technology in preparation for the main census, the support received from Technical Assistance by DFID and UNFPA easened data processing problems. Besides these difficulties, the commitment and desire to succeed, the team working on data processing and cleaning quickly learned and adapted to the demands of the technology.

9. REPORTS

The information collected in this census is scheduled to be published in a series of 3 reports: Volume I and II of the basic results, 8 monographs and 8 provincial reports. This volume constitutes the first basic report and contains information on the Population Density by Administrative Areas by Sex, Population Distribution by Age and Sex, and Population residing in Urban Areas by Municipalities, Towns and Other Urban Centres by Sex.

11. CONCLUSION

The above results underscore the usefulness of the data in highlighting the effectiveness of past policies, the need to improve planning and refining of policy strategies aimed at improving the welfare of the people. In particular, the data will facilitate informed decision in dealing with challenges posed by declining school enrolment rates, unemployment and the poor quality of housing.

The census results provide crucial data base and planning tools that will enable the use of geographic and statistical information for planning. The results also generate several social indicators and benchmarks that will provide useful inputs into poverty reduction strategy efforts.

All users are encouraged to utilise the census information and explore the modern avenues of applying the data for monitoring and evaluation purposes.

10.4 INTERCENSAL GROWTH RATES

The intercensal growth rates have significantly declined in Central, Eastern and Western provinces and remained relatively stable in Nairobi, Nyanza, Rift Valley and Coast (except during the 1979-89 intercensal period) since 1969. The national intercensal growth rate has declined from 3.4 percent in 1969 to 2.9 percent in 1999. It should however be noted that the intercensal growth rate is the *average annual* growth rate which is derived from aggregate figures.

Table Ib: Intercensal Growth Rate

Province	1969-79	1979-89	1989-99
Nairobi	4.9	4.7	4.8
Central	3.4	2.8	1.8
Coast	3.5	3.1	3.1
Eastern	3.5	3.3	2.1
N/Eastern	4.2	-0.1	9.5
Nyanza	2.2	2.8	2.3
Rift-Valley	3.8	4.2	3.5
Western	3.2	3.6	2.5
Kenya	3.4	3.4	2.9

However, the real (intrinsic) growth rate for 1999 will be ascertained using the estimates of birth and death rates. This rate is expected to be lower than the intercensal growth rate given the decline in fertility experienced during the 1989/99 period and other intermediate sample data.

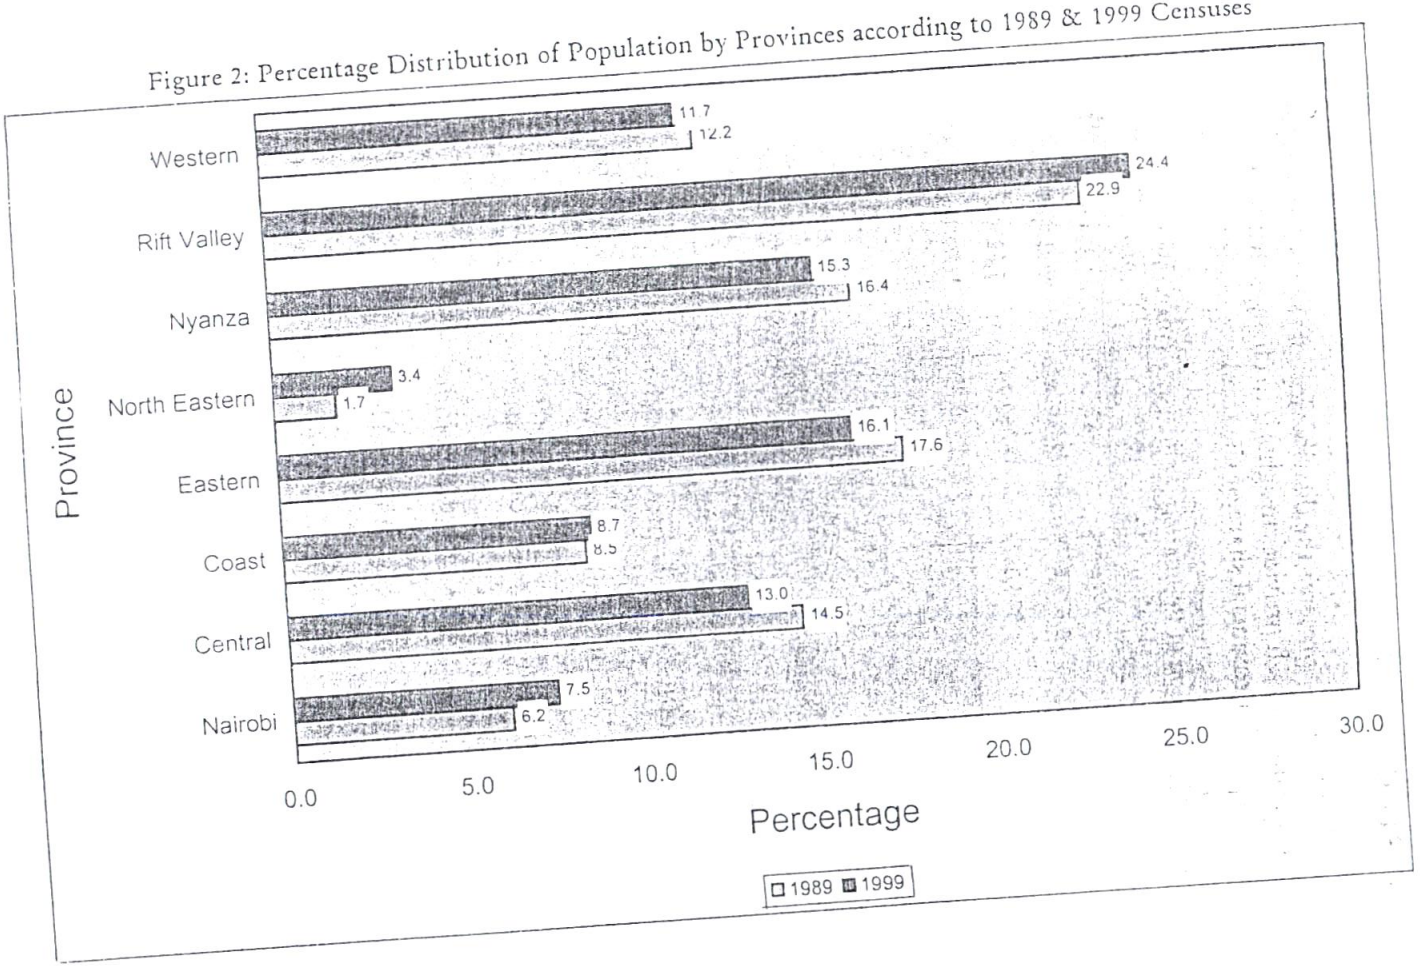
Table 3 of this basic report provides data on urbanisation. We have adhered to the legal boundaries as per special issue of the Kenya Gazette of 3rd December, 1999. However, to maintain the criteria used in previous censuses, the population for municipalities and town councils, includes the core urban and peri-urban components. The population for other towns takes into account the core urban component only. The sex ratios show the number of male per 100 females. The results indicate that most of the urban population was enumerated in major urban centres, particularly municipalities.

The following sub-locations did not have people on the Census Night as per the reasons given against each one of them.

Table Ic: Forests & National Parks

District	Sub-Location	Reason
Kirinyaga	Mt. Kenya Forest	Forest Area
Nyandarua	National Park	National Park
	Kiamweri Forest	Forest Area
Maragua	Gatare Forest	Forest Area
Tana River	Tsavo E. National Park	National Park
Meru Central	Mt. Kenya 1 Forest	Forest Area
	Mt. Kenya 2 Forest	Forest Area
	National Park	National Park
	Imenti Forest	Forest Area
Nithi (Meru South)	Mr. Kenya Forest	Forest Area
Mt. Elgon	Mt. Elgon Forest	Forest Area
Other Cases		
Lamu	Mararani	There were no people
Isiolo	Korbesa	Enumerated in other EAs due to nomadic nature of the households
	Ururа	Enumerated in other EAs due to nomadic nature of the households
	Duma	Enumerated in other EAs due to nomadic nature of the households
	Quri	There were no people
Turkana	Kakong	Enumerated in Kainuk due to insecurity

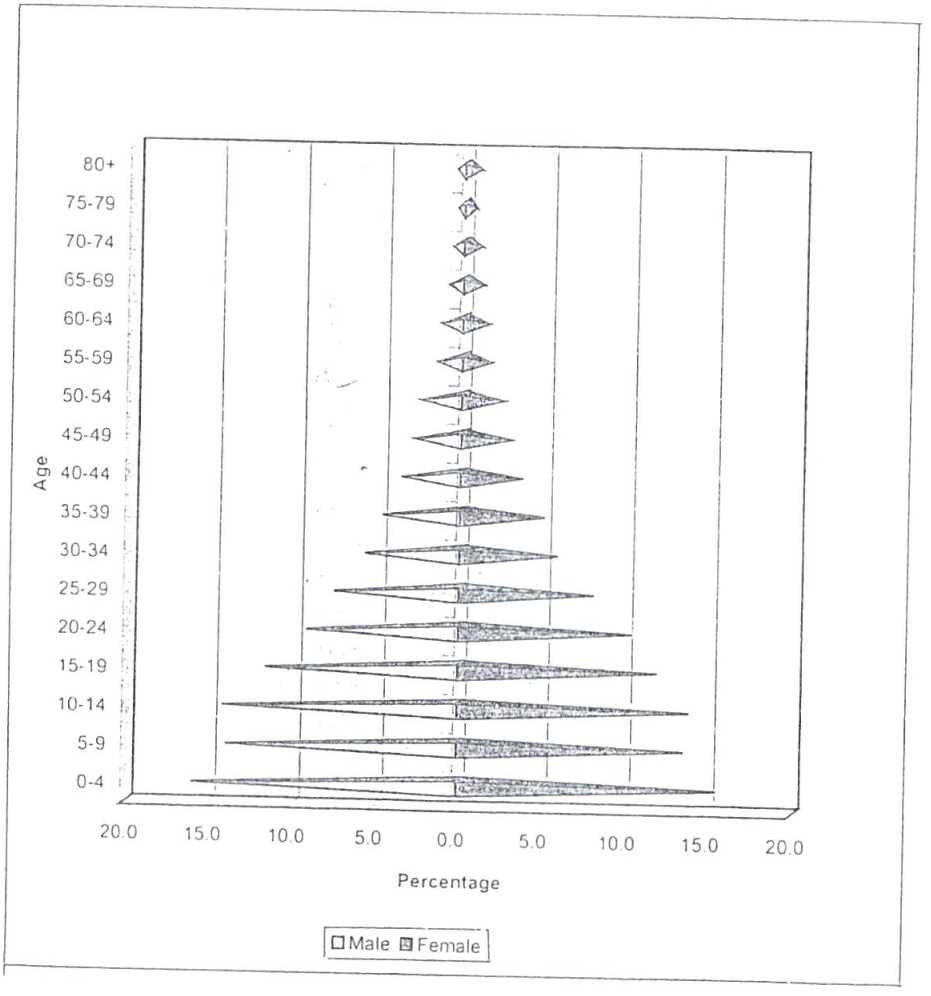
Figure 2: Percentage Distribution of Population by Provinces according to 1989 & 1999 Censuses



10.3 POPULATION PYRAMID

The population pyramid shows that the population is still young. The pyramid is derived by expressing each age group as a proportion of the total for each sex. Forty four percent (44 percent) of the people were aged below 15 years, 52 percent were aged 15 to 64 years and 4 percent were aged 65 and above years. It should, however, be acknowledged that the fertility decline, which has been experienced during the 1989/99 intercensal period, has been a major contributing factor to the decline in the percentage of the population aged below 15 years as compared to 49 percent in 1989.

Figure 3: Population Pyramid, 1999 Census

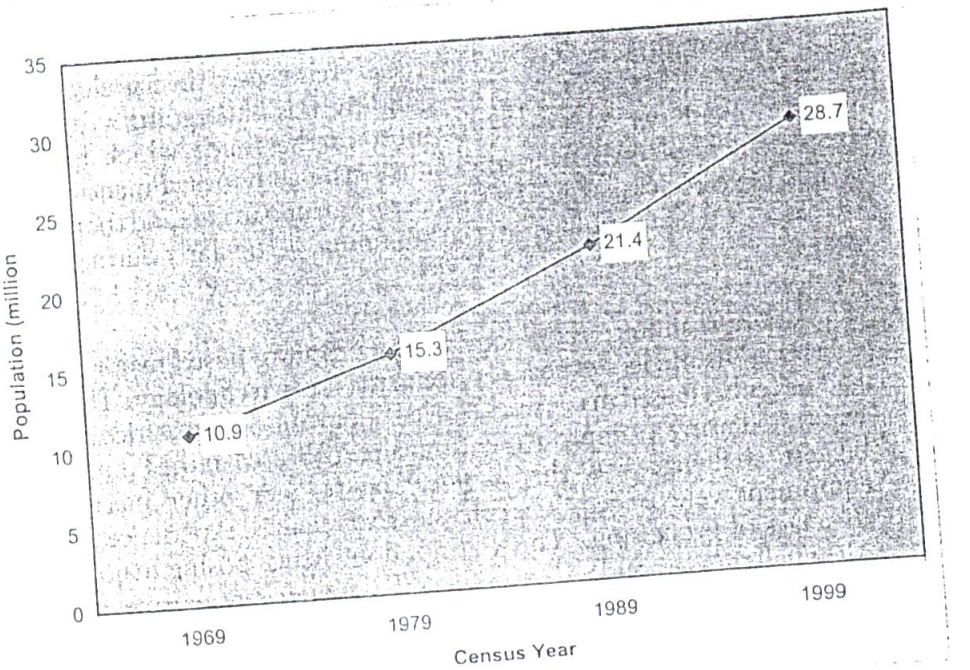


10. SUMMARY OF FINDINGS

10.1 ENUMERATED POPULATION

A total of 28,686,607 people were enumerated in the 1999 census, representing an increase of 34 percent over the 1989 enumerated figure. Of this, 14,205,589 were males and 14,481,018 were females. Figure 1 shows the trend of the enumerated population of Kenya since the 1969 Census.

Figure 1: Trend of Kenya's Enumerated Population



10.2 DISTRIBUTION OF POPULATION BY PROVINCE

The Table below presents the distribution of the population by province in absolute numbers. It provides insights into changes that have taken place with regard to each provincial share of the total population.

Table Ia: Distribution of Population by Province (1969-1999)

Province	1969	1979	1989	1999
Nairobi	509,286	827,775	1,324,570	2,143,254
Central	1,675,647	2,345,833	3,111,255	3,724,159
Coast	944,082	1,342,794	1,825,761	2,487,264
Eastern	1,907,301	2,719,851	3,768,689	4,631,779
N/Eastern	245,757	373,787	371,391	962,143
Nyanza	2,122,045	2,643,956	3,507,160	4,392,196
Rift-Valley	2,210,289	3,240,402	4,917,551	6,987,036
Western	1,328,298	1,832,663	2,622,397	3,358,776
Kenya	10,942,705	15,327,061	21,448,774	28,686,607

Figure 2 overleaf illustrates the provincial shares of the total population. The provinces whose shares have increased consistently since 1969 are Nairobi and Rift Valley which both benefited from considerable urban immigration. The marginal increase in the share of Coast Province can also be explained by rural-urban migration phenomenon. North Eastern shows a doubling of its share over 1989, but this is explained by the under-enumeration which was experienced in 1989 as well as the refugee influx. Among the other provinces, Western, Eastern and Nyanza have experienced declines in their proportional share, mainly because of out-migration and increased mortality. The increased mortality possibly arising from the HIV/AIDS related deaths partially explain the observed trend. The decline of the share observed in Central is a combination of out-migration and the declining fertility rates. Despite all these changes the overall ranking in population size for each province in 1999 compared to 1989 has not changed.

APPENDIX 1

ENUMERATOR'S INSTRUCTIONS MANUAL

PART I: INTRODUCTION

What is a Population Census?

1. A population census is a complete enumeration of all persons in a country at a specified time. It is the primary source of benchmark statistics on the size, distribution, composition and other social and economic characteristics of the population. Kenya has conducted five censuses since 1948. The 1999 census will be the sixth. The last census was conducted in August 1989.

Objective of 1999 Population Census

2. The 1999 Kenya Population and Housing Census is being held in order to provide information which is essential for sound development planning, making administrative and policy decisions, and research. It is, therefore, extremely important that the data collected in the census is complete and accurate.

The Census Organisation

3. At the national level, the Census is headed by the **National Census Officer (NCO)** who is the PC, Nairobi, and the **National Census Co-ordinator (NCC)**, who is the Director of Statistics. There are also two committees, namely the **Census Secretariat** responsible for all technical, logistical and administrative aspects of the census; and the **National Census Steering Committee**, which advises the Secretariat and co-ordinates its activities. Each district has a **District Census Officer (DCO)** who is in charge of the census activities in the district. In each Division and Municipality, there is an Assistant DCO who is assisted by a number of senior supervisors who are in turn assisted by **supervisors.** Each enumerator is answerable to a supervisor.

Legal Authority to undertake the Census

4. The Statistics Act (Chapter 112) of the Laws of Kenya empowers the **Director of Statistics** to carry out censuses at periodic intervals. This census, therefore, will be carried out under the provision of this Act. **A legal Notice No. 121 of 11th September 1998 and amendment No. 25 of 22nd February 1999 have been gazetted to facilitate the carrying out of the 1999 Census.**

5. As a census official, the law accords you access to any premises, compound or house for the purpose of enumerating persons. However, the law requires you to conduct yourself properly. In particular, it provides that you may only ask such questions as are necessary to complete the questionnaire or check entries already made.

6. Penalties are provided for if members of the public fail to furnish you with the required information or you fail in your duties. The law particularly stresses on confidentiality of the information collected from individuals.

Confidentiality of the Information

7. The information you obtain is confidential and will be used only to compile statistics. You are not permitted to discuss it, gossip about it, or show your records to anyone who is not an authorised officer within the Census Organisation. Make all entries on the questionnaire yourself. On no account should you allow any unauthorised persons to fill in any part of the questionnaire. Do not leave your questionnaires lying around anyhow where unauthorised persons may have access to them.

8. To enforce this confidentiality, you will take an **Oath of Secrecy**. This oath is prescribed by the law and is normally administered to all persons engaged in the census under the **Statistics Act.**

Role of the Enumerator

9. The enumerator's role is central to the very success of the census. It is important that all enumerators carefully follow the laid down procedures. Your job is to visit every household in the assigned area and record all particulars required of persons who will have spent the Census Night in the area. You will ask all the questions and record the answers that are provided to you. You should make every effort to obtain complete and accurate answers and to record them correctly. Since the success of the

census also depends upon public co-operation, it is your duty to achieve this by being polite, patient, presentable and tactful at all times.

Neutrality

10. Please note that most people are usually polite especially to strangers. They tend to give answers that they think will please the interviewer. It is therefore extremely important that you remain absolutely neutral towards the subject matter of interview. Do not show any surprise, approval or disapproval of the respondent's answer by your tone of voice or facial expression.

How to Approach the Respondents

11. Act as though you expect friendly co-operation and behave so as to deserve it.

12. Start interviewing only when you have observed the following: exchanged proper greetings; identified yourself; explained the purpose of your visit; and have answered any questions and/or clarified issues about the census that the people may ask. However, do not spend too much time asking and/or answering unnecessary questions. You may cleverly avoid such questions by suggesting that you have limited time.

13. During the interview let people take their time to answer. Do not ask leading questions. Work steadily and make sure that the answers are clear to you before you write them down. Do not accept at once any statement you believe to be mistaken. Tactfully ask further questions to obtain the correct answers (i.e. probe).

14. It may happen that someone refuses to answer your questions. Almost always this is because of misunderstanding. Remain courteous. Stress the importance of the census and that it has nothing to do with taxation or similar Government activities; that the information is confidential; that no one outside the census organisation will be allowed access to the records; that details of individual people are never released for any purpose whatsoever and; that census results are published only as numerical tables. You should be able to clear up any misunderstanding, but if you cannot persuade the person to help, or if his/her refusal is deliberate, tell the person that he/she may be liable to prosecution. Report any such incident to your supervisor or any other responsible census official at the first opportunity.

15. When leaving a household, always remember to thank the people for their co-operation.

Your Equipment

16. Upon successful completion of your training, you will be issued with:

- Books of main census questionnaires and/or 3 short questionnaires for enumeration of persons in hotels/lodges, travellers or persons on transit and persons of no fixed abode.
- Enumeration cards for travellers or persons on transit.
- Enumerator's instructions manual.
- An identification badge.
- Map of your assigned area.
- A field note book.
- Two pencils, one eraser and one sharpener.
- Call-back cards for urban areas only.
- Chalk .
- Enumerator's bag.

You will be required to return all the census books to your supervisor (both filled and unused) at the end of the enumeration in order to be paid your money.

PART II: GENERAL INSTRUCTIONS

The Enumeration Area (EA)

17. Ideally, an EA should constitute about 100 households, comprising part of a village, a whole village or a group of villages. However, owing to other factors, mainly population density and geographic terrain, EAs have been conveniently demarcated to facilitate effective canvassing by an enumerator. Consequently, the EA you have been assigned may consist of more or less households.

18. Each sub-location is covered with a map or maps showing all the EAs in the sub-location. However, there are other areas which have been mapped without reference to any sub-location e.g. national parks and forest areas.

19. You will be assigned an EA or part of it. You will be responsible for visiting every household in it and recording the particulars of all persons in that enumeration area during the Census. **Do not miss out any household in your EA nor count any twice.**

20. The boundaries of your EA will be explained and shown to you by your supervisor. Make sure you acquaint yourself with your EA before you start work.

21. Spend two days before the **CENSUS NIGHT** going round your EA. Find out where the houses, huts/hamlets are and introduce yourself to the people so that when you begin the enumeration, they already know and are expecting you. Identify all the households in the EA.

    (a) Make sure that you read the EA map carefully so that the boundaries are clear to you both on the ground and on the map. In most cases, the boundaries of your EA follow easily identifiable features such as rivers, streams, roads, tracks and footpaths. In the densely populated areas and where the EA boundary is imaginary, the households/structures on each side of the EA boundary have been plotted.

(b) On each map, there is a legend showing what each symbol represents. The legend should be consulted as much as possible (see map in Appendix 1).

22. Use the EA map to plan your work so that you can visit each inhabited place and each household in turn. Work in an orderly way. You will save yourself much walking time and a great deal of trouble if you do this. Tell your supervisor where you will start and which paths you will follow so that he/she can easily find you.

23. Each EA map representing a sub-location or forest or National Park has been given a unique code number composed of thirteen digits. Each EA on the map has been given a unique code number composed of four digits. In the first case:

- 1st digit represents the Province;
- 2nd and 3rd digits represent the District;
- 4th and 5th digits represent the Division;
- 6th and 7th digits represent the Location;
- 8th and 9th digits represent the Sub-location or Forest or National Park;
- 10th, 11th and 12th digits represent the EA number, and;
- 13th digit represents the EA type.

24. There are 4 categories of EAs, i.e. EAs in settled agricultural areas, urban, arid and semi-arid areas, and forests and national parks or reserves.

(a) EAs in the settled agricultural areas are based on villages e.g. an EA is formed by part of a village, a whole village or by combining two or more villages. In case of difficulty or doubt about the EA boundary, it will be helpful to contact your supervisor, the Assistant Chief or Village Elder.

(b) In the urban areas, the EAs are based on the sub-location boundaries. All the structures have been numbered and are clearly shown on the maps. For example, the 9th structure is numbered KPC/CBS/99/009 on the ground and 009 on the map.

(c) In the arid and semi-arid areas, the EAs have been delineated on the basis of settlement centres. The boundaries have been fixed arbitrarily. You should trace exactly where the settlements are in

your EA. You must contact your supervisor, the Assistant Chief or Village Elder to assist you to find the settlement centres.

(c) Large forests and National Reserves have been treated as EAs on their own. You must, with the assistance of the forest officials or game wardens, identify where the people live in such EAs.

25. (a) The EA maps have been prepared using various scales for different areas. The following are examples of such scales:

Scale Category	
1:2,500 Urban:	1cm on the map represents 25m on the ground
1:5,000 Urban - Rural:	1cm on the map represents 50m on the ground
1:10,000 Urban - Rural:	1cm on the map represents 100m on the ground
1:12,500 Rural:	1cm on the map represents 125m on the ground
1:20,000 Rural:	1cm on the map represents 200m on the ground
1:25,000 Rural:	1cm on the map represents 250m on the ground
1:50,000 Rural:	1cm on the map represents 500m on the ground
1:250,000 Arid & Semi-arid:	1cm on the map represents 2500m on the ground

(b) In order to determine distances on the ground using the map, you must use your paces. For example, take your pace to be approximately 1m. Measure the distance you want on your map in cms and using the map scale find the distance in metres on the ground. If you are using a map of 1:10,000 and you measure 2cm on the map, this is equivalent to 200 metres on the ground. You are therefore supposed to walk approximately 200 paces to cover the distance measured on the map.

(c) Before you can start using your map in the field, it is important that you align the map correctly with the features on the ground. For example there may be a road on the ground where you are already standing. The map should be aligned in the correct direction of the road so that the road on the ground and the road on the map point to the same direction.

Some Key Concepts

26. Given below are definitions to describe places of abode.

Homestead

Is an isolated compound with one or more structures, and usually inhabited by one or more households. In most cases homesteads will be surrounded by fences, hedges, walls etc. A homestead may contain for example, a hut or a group of huts. A manyatta will thus be considered a homestead. However, a wall/fence or hedge need not necessarily surround a homestead. For instance, boys' quarters, garage, kitchen etc. may be part of a homestead whether or not they are surrounded by a fence/wall, etc. During enumeration, you will visit homesteads and identify the structures, dwelling units and households in them.

Structure

A structure is a building used for the purposes of business or any other activity. For census purposes, a structure constitutes a building used for dwelling purposes. In rural areas, most of the structures will be found within a homestead. A structure can contain one or more dwelling units. In urban areas a structure may contain several dwelling units. For example, storeyed buildings, etc contain more than one dwelling unit.

Dwelling Unit

This is a place of abode or residence occupied by one or more households with a "**private entrance**". There can be many dwelling units within a structure.

Conventional Households

27 Usually consist of a person or a group of persons who live together in the same homestead/compound but not necessarily in the same dwelling unit, have common housekeeping arrangements, and are answerable to the same household head. It is important to remember that members of a household are not necessarily related (by blood or marriage).

28. Determination of households may not be easy. However, the following examples should guide you in deciding who should form a household.

(a) A household may consist of one or more persons and may occupy a whole building or part of a building or many buildings in the same compound/homestead.

(b) If two or more groups of persons live in the same dwelling unit and have separate eating and/or sleeping arrangements, treat them as separate households.

(c) A domestic servant who eats with the household should be included with the household. If the servant cooks and eats separately, he/she should be enumerated as living in a separate household.

(d) The particulars of persons who will have spent the **CENSUS NIGHT** with another household should be recorded on the questionnaire for that household.

(e) In a polygamous marriage, if the wives are living in separate dwelling units, and cook and eat separately, treat the wives as separate households. Each wife with her children will therefore constitute a separate household. The husband will be listed in the household where he will have spent the **CENSUS NIGHT**. If the wives eat together and live in the same dwelling unit, then treat them as one "household".

(f) It is the custom in many parts of Kenya for boys to live in separate quarters between circumcision and marriage, while continuing to take their meals with their parents. Enumerate them with their parent's households.

(g) For census purposes, you will list only those persons who will have spent the **CENSUS NIGHT** (the Night of 24/25 August, 1999) with the household, whether visitors, servants, etc.

Non-Conventional Households

29. There are cases whereby certain rules used to decide what is a household do not apply. Here are some further guidelines to help you:

(a) Sometimes groups of people live together but cannot be said to belong to an "ordinary" household. Examples are hospitals, schools/colleges, barracks or prisons. These are institutional populations and will be covered separately. Write the name of the institution at the top of the census questionnaire.

(b) The **District Census Officer** or the **Assistant District Census Officer** will make arrangements for enumerating persons in institutions such as hospitals, military barracks, the G.S.U camps,

refugee camps and prisons. You may be instructed to help with the enumeration of these "special" population groups (or non-conventional households). You are to administer the entire questionnaire, save for part D which deals with housing conditions, to such populations. In most cases, the enumerators designated to work in such institutions will themselves be from the institutions.

(c) Persons who sleep outdoors will be counted using a **short questionnaire**. The questionnaire is pre-coded with household number "999" and household type "5". You will be required to record the place/street of enumeration, the location/spot of enumeration and the number of vagrants counted by sex.

The DCO or the Assistant DCO will make the necessary arrangements to have them enumerated. Such persons shall all be counted strictly on the **CENSUS NIGHT.**

(d) The Hotels/lodges and boarding houses will also be supplied with **short questionnaires**. On the evening of the **CENSUS NIGHT,** hotel managers, with the assistance of the supervisors, will supply short questionnaires to all persons who will spend the **CENSUS NIGHT** in hotels/lodges or boarding houses. The questionnaires have been pre-coded with household number "997" and household type "3".
The DCO or the Assistant DCO will make the necessary arrangements to have them enumerated. Such persons shall all be counted strictly on the **CENSUS NIGHT**

(e) Persons working in institutions such as those listed in (a) above but who live in their own households should be enumerated with their own household members and not with the institution. Thus, a nurse on night duty should be enumerated with her household and not with patients at the hospital. Similarly, a teacher should be enumerated with his/her household and not with students or boarders at the school or training institution. The same applies to night workers of all kind such as watchmen, factory workers, policemen etc. Probe to establish whether this group of workers have households where they usually reside. If they don't have, enumerate them as outdoor sleepers.

(f) All persons who will be on transit or travelling on the **CENSUS NIGHT** by Road, Rail or Air will be enumerated at their place of boarding. You will be issued with short questionnaires for the

purpose of enumerating such people. The questionnaires will b pre-coded with household number "998" and household type "4" You will also be supplied with **Enumeration Cards** to issue to such persons once you count them. Inform them that they are to keep the cards until the census is over to avoid being counted twice. The information required from such people will be restricted to Sex and Age only. Do not spend a lot of time trying to establish the age of such respondents. A rough estimate will do.

The DCO or the Assistant DCO will make the necessary arrangements to have them enumerated. Such persons shall all be counted strictly on the **CENSUS NIGHT**

Who and When Should You Enumerate

30. You must obtain particulars of all persons who will have spent the **CENSUS NIGHT** in the household. However, it is not likely that you will see all members of the households, nor is it absolutely necessary that you should. **It will be best if the head of the household is present. However, it will be enough if there is one responsible adult who can give the information required.**

31. Sometimes there are persons who would normally have slept in the household on the **CENSUS NIGHT** but who are/were temporarily absent due to the nature of their work and are/were elsewhere within the borders of Kenya where they could not be enumerated. Examples are watchmen, nurses, police officers and shift workers on night duty, herdsmen out with livestock, night fishermen, hunters, honey harvesters and persons attending hospital outpatient departments through the night. Such persons are to be enumerated with their usual household members.

32. **You should try to cover as many households as you can on the CENSUS NIGHT as this will greatly reduce your chances of duplicating or missing out respondents.**

33. You will start work as early as possible on the **CENSUS NIGHT** (24/25th August 1999) and ensure that the work is completed within the shortest period possible. A provision has been made to extend the period of enumeration up to 31st August 1999 by which time you should have enumerated everyone that will have spent the **CENSUS NIGHT** in your EA. If, for some reason, you think it will take longer, you should inform your supervisor in good time so that he/she may be able to arrange to have someone to help you. If, for instance, you become ill or get injured so that

you cannot continue with the enumeration, you must let your supervisor know at once. The best times for visiting households are early in the morning before people go to work, and in the evenings. People will often stay to meet you if you send word that you will visit.

What happens if there is no one at home

34. It may happen that when you visit a house that is inhabited you are unable to obtain any information, either because there is no one at home, or because all adults are away at the time, or for some other reason.

    (a) If only children are at home, ask them when their parents are likely to be at home and arrange for the next visit accordingly.

    (b) If there is no one at home, ask the neighbours if anyone was there on the **CENSUS NIGHT**. If there was, enquire whether they have any idea when members of the household are likely to be at home and arrange your next visit accordingly.

    (c) If you are working in an urban area, complete a **Call-Back Card** stating the day and time of your next visit and leave it with a neighbour or push it under the door so that the people are aware of your next visit. If you are in a rural area, leave word about the time of your next visit. Keep a record of the call-backs.

    (d) If after three visits you have not succeeded in finding anyone at home, make a note of the address and tell your supervisor about it.

    (e) It may be that for some reason your call is at an inconvenient time for members of the household. Do not lightly allow yourself to be put off, but if there is some weighty reason - such as death in the household - arrange to return at a more convenient time.

    (f) Call-backs will involve you in more extra work. On any enumeration day be wise; send word of your visit ahead of you so that people know when to expect you. If you have to make call-backs, clear them early. If you make an appointment to return, be punctual.

35. At times due to confusion of EA boundaries, you may find that an enumerator from a neighbouring EA has been enumerating people in your area and numbering their dwelling units. If this happens make sure, first of all, that you are within your area as you understand the boundaries. If you have crossed your boundary by mistake, return to your area and go on

with your work. If you are satisfied that you are right and that the households are in your area, make a note of the affected households and immediately inform your supervisor. Do not enumerate the people a second time. Continue enumerating other households in your area.

Use of Chalk

36. You will be given a supply of chalk. It is to be used to mark those houses you have visited and whose occupants you have enumerated.

(a) The purpose of this is to ensure that no household is enumerated twice nor missed out. It will also serve to give each household a temporary address for census purposes. This makes checking easier.

(b) When you have enumerated the members of the household, write the household number in some conspicuous place. Write the number neatly where it will be easily visible to your supervisor and out of reach of small children. Ask the household members to leave it up until the end of November, so that they may be spared the inconvenience of unnecessary visits by census staff. Explain that the number is used for census purposes only.

(c) If there is more than one household in a building or structure, write the number at the entrance to the household's living quarters.

(d) If the household occupies more than one building or structure, write the number on the most obvious of them (or the main residential/dwelling structure/unit).

(e) Do not mark a dwelling until you have enumerated the members of the household.

The Main Census Questionnaire

37. The main census questionnaire will be used to cover persons in conventional households. The questionnaires will be issued to you bound in books of fifty forms. **No forms are to be torn out or destroyed.** You will have to account for all of them. You must handle these forms with care and avoid crumpling or mutilating them, as this might result in rejection during data processing.

38. The information recorded on the questionnaire should be summarised on the front cover of the books.

39. Details on how to complete the main questionnaire is provided in Part III of this manual.

The Short Census Questionnaires

40. Three short questionnaires will also be issued to enumerators who will cover people in hotels/lodges or boarding houses, travellers or people on transit, and outdoor sleepers on the census night.

Check your Work

41. Check your work before you leave the household to make sure that you have filled the questionnaire accurately and fully in order to avoid being sent back by your supervisor to correct mistakes. In particular, check that you have enumerated everybody who will have spent the **Census Night** in the household and that all the relevant questions have been answered correctly.

PART III HOW TO FILL IN THE MAIN QUESTIONNAIRE

General Rules

42. (a) Complete the questionnaire yourself
(b) Keep it clean
(c) Write legibly in capitals
(d) Code strictly in the boxes provided on the questionnaire
(e) Start each household on a separate questionnaire.

43. If you make a mistake, rub it out neatly with a clean eraser and correct it.

44. If, for some reason, you make a mistake involving a whole household, draw a diagonal line across the questionnaire, write along it **'SPOILT'** and complete a new questionnaire for the household. **On no account should a spoilt questionnaire be torn out of the book.**

45. If there are more than ten people in the household, continue on the next sheet. Write the serial number of the continuation form at the foot of the first sheet in the boxes provided. Continue to number the persons serially so that the first person on the second page will usually be **number 11.** Use as many sheets as may be necessary for the household. **Remember to enter the household's identification information on the continuation questionnaire as well.**

46. It is important that each enumerator asks the questions in the same way. You must learn the form and the order in which the questions are to be put.

47. It is **EXTREMELY** important to note at the very outset that the 1999 Census will employ electronic (scanning method) rather than manual data capture to read the census questionnaires. Consequently you must complete the questionnaire carefully by writing legibly and clearly within the boxes provided. Make sure any writing is done within the confines of the boxes provided. Try as much as possible to avoid making mistakes as they will warrant frequent erasing, which will not augur well for accurate capture of information from the questionnaire. Whenever you pose a question to the respondent listen carefully to the response and write it down **ONLY** when you are sure it is satisfactory.

Layout of the Main Census Questionnaire

48. The main census questionnaire is divided into seven parts as outlined below:

(a) The top of the form is reserved for information identifying the household and is to be completed for each household.

(b) The top right hand corner of the form is for entering structure number only in urban areas.

(c) Columns P00 to P21 contain questions which apply to all persons. You are required to ask the questions of **all persons** and make written entries for the same.

(d) Columns P22 to P24 contain questions on education and are to be asked of **all persons aged 5 years and over**.

(e) Column P30 contains a question on labour force participation. This is to be asked of **all persons aged 5 years and above**.

(f) Columns P40 to P51, contain questions which apply to all females aged 12 years and above. You are required to ask the questions of **all females aged 12 years and above** and make appropriate entries for each.

As far as possible, obtain the information directly from the female concerned. Information should only be obtained from someone else if the respondent cannot be reached. If the information is given to you by someone other than the person concerned, and some details are not known, write "DK" in the appropriate box. It is important that you make every effort to obtain full and correct answers and avoid unnecessary use of 'DK'.

(g) Columns H10 to H19 contain questions on housing conditions and amenities. These questions are to be asked **of the Head of the Household or any other responsible person.**

The Interview and the Questions

49. **CENSUS NIGHT:** All enumeration must relate to the **CENSUS NIGHT**. This will be **THE MIDNIGHT OF 24/25TH AUGUST, 1999.** This night will be the reference time to which all enumeration should relate. Note that **ONLY PERSONS ALIVE IN KENYA AT THIS TIME SHOULD BE ENUMERATED.**

    The **CENSUS NIGHT** has been publicised in advance throughout the country. Remember that all the questions you ask must relate to the **CENSUS NIGHT** unless you have specific instructions to the contrary in this manual, e.g. the labour force participation question.

50. Note that between the **CENSUS NIGHT** and the time of enumeration, the composition of a particular household may have changed. If somebody died after **CENSUS NIGHT**, you should enumerate him as living on **CENSUS NIGHT**. If a baby was born after **CENSUS NIGHT**, you should not enumerate him/her. Visitors are enumerated if they will have spent the **CENSUS NIGHT** in the household.

51. When you arrive at a house, greet the occupants and identify yourself as a census enumerator.

52. Ask for the Head of the household. Note that the head of household is the person who is regarded by the members of the household as its head, and may be a man or a woman. For the purpose of the census he/she must have spent the **CENSUS NIGHT** with the household. If the head of the household was not present on the **CENSUS NIGHT**, ask for the next senior and/or responsible person who will have spent the **CENSUS NIGHT** in the household. Make this person the household head. However, if the head of the household is present, he/she may furnish you with the details of the household, despite his/her not spending the **CENSUS NIGHT** with the household.

53. When you are enumerating members of an institution, you will seek assistance from the person in charge of the institution to be able to get the required information.

54. Explain that you must record particulars of everyone who was present at the institution on the **CENSUS NIGHT**. However, remember to exclude people who live in their households within the institution or people who work in the institution but live with their households elsewhere.

55. Next, complete the information required in the boxes at the top of the questionnaire. Write the codes of the Province, District, Division, Location, Sub-location, EA Number, Household Number and Household Type. All the above information is contained on the EA maps except the household numbers and structure numbers. Enter the household type code depending on the type of the household, i.e. "1" for ordinary/conventional households and "2" for institutional households.

Column P00: Name

56. Make a list of all persons who will have spent the **CENSUS NIGHT** in the household, starting with the head of the household, if he/she was present, or the person in charge of the household at the time. Respondents may not know which was the **CENSUS NIGHT**, in which case you should explain by referring to the **MIDNIGHT OF 24/25TH AUGUST, 1999.**

57. Write the names in Column (P00). Some people have many names. It is not necessary to write them all as long as you record the name or names which the person is usually known by. Identifying members of the households with their correct names will help you not only in listing down all of them but will also come in handy when call-backs on certain members are to be made. It is important that you list at least two names of the persons in a set order so that you have a clear picture of the household from the very beginning.

58. List members of the household by nuclear family, starting with the head and his wife and children, beginning with the eldest and working down to the youngest. If the head has more than one wife living in the same household, list the first wife and her children followed by the second wife and her children, then other relatives and non-relatives in that order, including visitors.

59. Very young children are sometimes forgotten or even deliberately left out as being unimportant. **ALL PERSONS MUST BE ENUMERATED**. Pay particular attention to getting all babies counted. If the infant has no name, write 'Baby of.....(mother's or father's name)'.

60. Remember to ask about, and include night workers. Exclude hospital in-patients, persons staying in hotels, prisoners and the like. The above people will be covered under institutional populations as specified in paragraph 29.

61. When you have written down all the names, read over the list, and ask, "Is that correct?" If not, correct the list. Then ask "Was there anyone else here on the **CENSUS NIGHT** i.e. visitors, young children"; if so, include them.

Columns P10 and 11: Relationship and Sex

62. As you write the names in column P00, code relationship in column P10 and sex in column P11. You will save yourself trouble by doing this.

(a) For example: for Head, code "1" in P10 and tick the appropriate box in P11 as far as sex is concerned. Then code the relationship of each person to the head, that is "2" for spouse, "3" for son, "4" for daughter, "5" for brother/sister, "6" for father/mother, "7" for 'other relatives' such as nieces, nephews, grandsons, etc., "8" for non-relatives such as visitors, friends etc., and "9" for those who cannot be categorised as above, not stated or don't know.

(b) You must probe to find out whether the children you have coded as sons and daughters are the head's biological children. If they are not, establish further whether they should fall under " 7" (other-relative) or "8" (non-relative).

(c) There are several persons who are not related by blood or marriage but constitute a household, mostly in urban areas. Without telling them code one of them as 'head', (code "1") and the rest as 'non-relative' (code "8").

(d) Sometimes it may happen that members of the household are away and cannot be reached even after three visits, and the most responsible person you meet is a househelp or any other such person employed by the household. You must probe to establish the most senior member who will have spent the **CENSUS NIGHT** in the household. This person must be made the household head. You may then proceed to ask the househelp to provide information on the household members.

(e) There are certain communities where women are culturally allowed to "marry" other women. For purposes of the census, marriage should involve only partners of opposite sex. Whenever you encounter such cases where one woman (supposedly the head of the household) claims that another woman is her "spouse" code "7" (Other-relative) rather than "2" (spouse) in P10.

(f) Make sure you understand the relationship before you make any entry, and that the entry is strictly and legibly written within the boxes provided.

63. Check that the sex is compatible with relationship; do not assign "male" to persons shown as wives or daughters nor "female" for persons shown as sons or husbands. Take particular care to record the sex of very young children correctly. Often, you will not know whether a baby carried on its mother's back is a boy or a girl. In such cases, you must ask - do not guess. YOU SHOULD ENSURE THAT EVERYBODY'S SEX IS RECORDED. BLANKS AND "DK"s ARE STRICTLY FORBIDDEN.

Column P12: Age

64 **Age is one of the most important pieces of information to be sought in a census. You must try as much as possible to record the correct age of the respondent. Under no circumstances should this column be left blank. You must probe to make sure that you get even a rough estimate.**

65 **'How old is this Person?'**

(a) Always start by asking the person's age and follow up with the question on the date of birth as a consistency check on the former. Write the person's age in completed years - that is, the person's age at his or her last birthday. For babies under one year of age, write 00. Use two digits in completing age; e.g. "01", "02" etc. Persons aged 97 years and over should be coded "97". **Make sure always that your writing is legible and within the appropriate box.**

(b) Be careful not to round ages up to the next birthday. A child who is aged four years and eleven months should, for example be entered as "04" and not "05".

(c) Many people do not know their ages. If a person's age is not known, you must make the best estimate possible. **THE USE OF 'DK' IN THIS COLUMN IS STRICTLY FORBIDDEN.**

(d) There are various ways in which you can estimate a person's age. Sometimes, people have documents, such as baptismal certificates, which show the year of birth, in which case it is easy to calculate age.

(e) Most people have identity cards showing when they were born. These ID cards may be grossly inaccurate for people aged above 40. Avoid using the IDs as the sole means to estimate such a person's age. However, for persons below 40 years of age the ID cards may generally give a more accurate representation of age.

(f) Generally, it is not so easy to estimate age for members of the household if all of them are ignorant of their ages. Concentrate first on establishing the age(s) of one or two persons in the household. One reliable age may help in working out the ages of others if it is known whether they are older or younger and by how many years.

(g) It is sometimes possible to estimate a person's age by relating his or her birth to some notable historical event. With these instructions is a **Historical Calendar of Events** (see Appendix 2) which lists the dates of events in the history of each district. If the person can remember how old he/she was at the time of the event, you can work out the person's age.

66. **How to use the Historical Calendar of Events to Estimate the Respondent's Age**

(a) (i) Ask for any historical event (national or local) which occurred around the time of the birth/childhood of the respondent.

(ii) Ask how old the respondent was when that event occurred or how many years elapsed before his/her birth.

(iii) Then use this information to work out his/her age. For example, if a respondent was about 15 years when Kenya attained her Independence, this person should be 15 + 35 (i.e. 12th Dec.1963 to 23rd, August 1999) = 50 years. If this method fails, you should try the following approach.

(b) (i) Simply estimate how old he/she may be.

(ii) Then select from your list of local, or district historical events, some events which occurred about the time when according to your estimate, he/she must have been born.

(iii) Ask whether he/she has heard about any of those events.

(iv) If he/she has, ask him/her to give you an indication of how old he/she was when this event occurred or how many years elapsed before he/she was born.

(v) Then, from this information, work out his/her age.

67. Some tribes have systems of **'Age Grades'** or **'Age Sets'** from which a person's age can be worked out. A person's age grade may only give a rough idea of his or her age since the same grade may have in it people of widely different ages, but it is better than nothing. Some tribes have grades for men but not for women, but you can often obtain an idea of a woman's age by asking which age grade of men she associated with, or which her brothers belonged to and whether they are older or younger. Some age grades are listed in the **Calendar of Events.** You can enquire about others from chiefs and elders.

68. If all else fails, then base your estimate on biological relationships. For instance, a woman who does not know her age but who has two or three children of her own is unlikely to be less than 15 years old however small she may look. You may then try to work out her age by the following methods:

(a) Determine the age of her oldest child.

(b) Ask her to give an estimate of her age at the birth of this child. However without further probing, you should not base your assumption on the oldest child who is presently living. There is the likelihood that in certain cases, the first child died or that the woman had miscarriages or stillbirths. Therefore, if the woman tells you that she had one miscarriage or stillbirth before the oldest living child was born, you should make your estimation from the year of the first miscarriage/still-birth or live birth.

69. Note that some women do have children earlier than what generally obtains in the community. Therefore, in every case, you must find out whether she had her first child, miscarriage or stillbirth at the usual age before you estimate her age.

70. Only as a last resort should you estimate a person's age from his physical features. If you are obtaining information about an absent person from a

third party then rely on the information given to you to estimate the absent person's age.

71. When you have arrived at the best estimate you can make of a person's age, check that it is compatible with his or her relationship to others in the household. Obviously children cannot be older than their parents, women seldom marry before they are 12 and men before they are 18, and so on.

72. **Note that any estimate of age, however rough, is better than 'DK' in this column. Do the best you can to report ages accurately.**

Column P13: Tribe/Nationality

73. "What is this person's tribe?"

(a) Code the tribe from the code list provided at the back of the front cover. If the person is not a Kenyan, ask, "What is this person's nationality?"

(b) For Kenyan tribes, code using the tribe code list, for example: 'Kikuyu, 03'; 'Nandi, 23' etc. Accept the answer as given to you without question. For Kenyans of other origins code using the codes provided. For example, persons originating from Asia should be coded "45", whereas persons originating from European countries should be coded "46" etc.

(c) For foreigners, code using country of origin. For example, a person from England/Ireland, should be coded "55". All other Europeans should be coded "56". "Others" coded "58" should include all other persons originating from other continents not listed e.g. Canada, America, Australia, Russia etc.

(d) Do not become involved in any argument on this point. **The census is not concerned with the legal position**. Accept what the person tells you and record the tribe or nationality to which the person considers he/she belongs.

Column P14: Religion

74. "What is this person's religion?"
In column P14, code the person's religious group i.e. "1" for Catholics, "2" for Protestants, "4" for Muslims, etc.

Catholics
Those who believe in Catholic faith and recognise the Pope as the head of the Church.

Protestants
Group of churches which broke away from the Roman Catholic church e.g. Anglican Church of Kenya (ACK), Presbyterian, African Inland Church (AIC), Lutheran, Quakers, Methodists, Seventh Day Adventists (SDA) and Baptists.

Other Christians
This category caters for Christians who are not covered under code "1" and code "2" above e.g. Legion Maria, Israel, Jehovah Witnesses, etc.

Muslims
Those who profess the Moslem faith and recognise Muhammad as the prophet of God.

Traditionalists
Those who believe in divine powers, e.g. Dini ya Msambwa, Tent of the Living God, etc.

Others
Include people with religious affiliations other than the above-mentioned e.g. Buddhists, Bahais, Hindus etc.

No religion
These are people who do not believe in the existence of super natural powers neither do they follow any particular religion.

Column P15: Marital Status

75. "Is this person monogamously or polygamously married, widowed, divorced or separated, or never married?"

(a) Persons who have never been married including young children should be coded "1" (never married).

(b) People who regard themselves as husband and wife should be coded "2" or "3" regardless of whether or not they have been through any civil, religious or customary ceremonies. **The census is not trying to find out who is legally married and who is not. Accept the answer as it is given to you.**

(c) If a person is widowed at the time of the Census, he/she should be coded as "4", i.e. widowed. If a person has been widowed but has since remarried, he/she should be coded as Married ("2" or "3" as the case may be).

(d) If people think of themselves as divorced or separated, code them as such. It does not matter whether they have been to court or gone through other formalities. Accept the answer as it is given to you.

(e) Accept what people say about their marital status. Do not embarrass yourself or the respondent by enquiring into the nature of marriage or divorce.

Column P16: Birthplace

76. "Where was this person born?" **Birthplace is the usual place of residence of mother at the time of the respondent's birth.** This question is meant to establish persons who are not enumerated in their places of birth and hence have migrated. Sometimes expectant mothers move from the rural areas to urban areas for purposes of delivery since maternity services are better at the latter. This kind of movement is short lived and must not be confused with a migratory one. For example, if a woman who usually resides in Kiambu district moves to Nairobi to deliver her child, it will be assumed that the woman went to Nairobi purposely for maternity services. Thus the district of birth of the child will be recorded as Kiambu.

(a) For persons born in Kenya, code district using the list provided on the back side of the form cover. For example, for a person born in Kiambu code "201" and for a person born in Tharaka code "412".

(b) **If the district of birth is the same as the district of enumeration, mark an "X" in the smallest box in column P16, and leave the other three bigger boxes blank.**

(c) Relate the person's birthplace to the present district's frontiers as far as possible. District boundaries have been changed over the years and we want to relate a person's place of birth to the district as it is constituted now.

(d) For districts which have been split, probe to find the actual district of birth and code the name by which it is currently known.

(e) For persons born outside Kenya, code the country of birth. For example, a person born in Tanzania will be coded "002", Uganda "001", Somalia "004", American countries "096" etc.

(f) Code "888" if district of birth is not known and "999" for not stated

Column P17: Previous Residence

77. "Where was this person living in August 1998?" This question is applicable only to persons aged one year and above.

(a) If the person is aged below one year, code "000" in this column.

(b) For persons who were living in Kenya in August 1998, indicate the district code in column P17. For example persons whose previous residence is Kisii Central code "603".

(c) For districts which have been split, probe to find the actual district of residence in August 1998 and code the name by which it is currently known.

(d) Mark an "X" in the smallest box and leave the bigger three boxes blank if district of previous residence is the same as the district of enumeration.

(e) A person who may have been absent from home temporarily for some reason such as visiting relatives or in hospital, or who may have been overseas on a visit of **less than six months**, should be shown where they normally lived in August, 1998.

(f) It is necessary to make a separate enquiry for each member of the household because a man, for instance, does not always take his wife and children along when he goes away to work. He may only have some of his family with him leaving the others behind.

(g) If the person was living in another country in August 1998, use the code pertaining to the specific country.

(h) Code "888" if district of previous residence is not known and "999" for not stated.

Columns P18-19: Duration of Residence

78. "When did this person move to this district?" This question is applicable to all persons enumerated outside their district of birth.

(a) Record the month in P18 (e.g."05" for May) and year in P19 (e.g. "97" for 1997). Check to see that the person's age is consistent with duration of residence i.e. the person's age must always be greater or equal to duration of residence.

(b) For all persons enumerated in their district of birth, write "00" in the boxes in columns p18-19.

(c) Write "99" in the boxes in columns P18-19 if the date one moved is not known or not stated.

Columns P20-21: Orphanhood

79. "Is this person's father/mother alive?"

(a) Tick the box under the appropriate column in respect of the survival status of the respondent's biological father and mother. Note that at times destitute children are brought up or adopted at a very young age by relatives. Such foster parents should not be considered as the biological parents of the respondent. Please always probe to establish the reality of the situation.

(b) In some cases, a child's father/mother may not be married or living with the mother/father. In this case the mother/father might report that she/he does not know whether the father/mother of her child is alive or dead. In this case mark an "X" in the box for 'don't know'. You must always probe to ensure you obtain the most satisfactory answer.

Columns P22, 23 and 24: Education

80. The questions on education are applicable to persons aged 5 years and over. They refer to full-time education at formal educational institutions i.e. Pre-primary, Primary, Secondary and University.

Column P22: School Attendance

81. "Has this person ever attended school?" Record "1" for persons attending school this year, "2" for persons who have ever been to school and have

left school, "3" for persons who have never been to school, and "4" for persons whose schooling status is not known. Write "0" if the respondent is aged under five.

Column P23: Highest Level of Education Reached

82. "What is the highest level of education this person has reached?" Code in column P23 the highest level of formal education the person has reached i.e. class, form, University, the person has reached. If a person reached standard 4 and dropped out of school before completing it, he/she should be coded "04", etc. Refer to the code list on the cover page of the questionnaire.

Column P24: Highest Level of Education Completed

83. "What is the highest class or form this person has completed?" If a person was at school and left before completing standard 4 he/she should be coded as having completed standard 3 hence code "03". If a person is at school and is attending standard 4 he/she should be coded as having completed standard 3 hence code "03". Refer to the code list on the cover page of the questionnaire.

84. **The simple rule here is that for all persons attending school this year the Highest Level Completed should be one level lower than the Highest Level Reached. And for persons not attending school this year the Highest Level Completed may be the same as the Highest Level Reached or one level below it, but not greater.**

85. For example: record the highest class or form the person has completed in the formal primary and secondary school system e.g. a person in form one will have completed standard 8 and therefore should be coded as having completed standard 8, while those who have completed form one should be coded "11".1

(a) If a person has sat for 'O' level or 'A' level Exams, through correspondence courses etc., that is, the person has not gone to formal school to achieve these certificates, code his/her highest level of education according to the highest Exam he/she has sat and passed e.g. code "14" for 'O' level passed Exams etc.

(b) If the person has attended university but never completed or is currently attending under-graduate studies code "17". If the person has completed under-graduate and above, code "18".

Column P30: Labour Force Participation

86. **Column P30 contains a question on labour force participation during the LAST SEVEN DAYS PRECEDING THE CENSUS NIGHT and is asked of ALL PERSONS AGED 5 YEARS AND ABOVE**

87. Ask all persons aged 5 years and above.
"What was this person **MAINLY** doing during the last seven days preceding the **CENSUS NIGHT?**" What the respondent was **MAINLY** doing will denote the activity that occupied most of the respondent's time during the 7 days preceding the **CENSUS NIGHT**. The responses in column P30 are as follows:

Worked for Pay
Comprises persons who during the 7 days preceding the **CENSUS NIGHT** worked most of the time for wages, salaries, commissions, tips, contracts and paid in kind (especially in the rural areas where people who have rendered services may be paid using food or clothing).

On leave/sick leave
This group comprises all those with formal attachments to a job or business/enterprise but were not working during the reference period because they were sick or on holiday, seasonal workers, leave without pay, bad weather, etc. However, a person who is on leave such as a teacher but worked on family holding in the past 7 days preceding **CENSUS NIGHT** should be indicated as on leave.

Worked on Own/Family Business
This category comprises self-employed persons who worked on own business or persons who worked on family business for family gain. It includes "jua-kali" artisans, mechanics, traders in farm produce and family workers not on wage employment. **Any member of the household working on the holding for pay will fall under code "01".**

Worked on Own/Family Agricultural Holding
A holding in this case is the unit of land, farm or shamba which is owned or rented by the family and is used for purposes of cultivation or rearing livestock for subsistence. All the members of the household who are working on the holding without pay/profit will be coded "04" (i.e. working on Own/Family Agricultural Holding). **Any member of the household working on the holding for pay will fall under code "01" (i.e. worked for pay).**

Seeking Work

A person who in the 7 days preceding the **CENSUS NIGHT** was actively looking for work. **This category should not include the under-employed (i.e. those who have paid work but wish to leave for better opportunities).** Persons who have no work at all and are looking for work will fall under this category. If a person is working on the family holding but is seeking work, he/she should be coded as "working on family holding" and not as "seeking work". This category should include only persons who are available full time for work and hence are actively looking for it.

No Work Available

This is a person who is not working nor is looking for work because he/she is discouraged, but would usually take up a job when offered one.

Full-time Student

This is a person who spent most of his/her time in a regular educational institution (primary, secondary, college, university etc.) and hence not available for work. If, for instance, a student was on holiday during the 7 days preceding the **CENSUS NIGHT** and may have been engaged in gainful employment, he/she should be given the appropriate code "01".

Retired

This is a person who reports that during the 7 days preceding the **CENSUS NIGHT**, he/she was not engaged in any economic activity because he/she had retired either due to age, sickness or voluntarily. If a person has retired and is doing some work/business he/she should be coded appropriately, either as "01", "03" or "04". If he/she has retired and is seeking work he/she should be coded as "05".

Incapacitated

Is one who cannot work. Do not assume that all physically disabled persons cannot work. For example, a blind person who is in wage employment will fall under category "01" and not "08". Similarly lame/crippled persons working on the family holding should fall under category "03" or "04". Please probe.

Homemaker

Is a person of either sex involved in household chores in his/her own home e.g. fetching water, cooking, babysitting etc., who did not work for pay or profit nor sought work. These categories should not include houseboys/girls who fall under category "01". If such a person worked on

family holding they should be coded as "03" or "04" and not as "10". Please probe.

Other

This category Includes any other persons not mentioned above. You are to probe to find out whether unpaid family workers consider themselves as 'seeking work', etc. and code them accordingly. For example, if a young man helps his uncle to sell goods in a kiosk without receiving pay, probe whether he is 'seeking work' and code him thus; if he considers himself as working code him as "01".

For persons aged below 5 years leave column P30 blank. For respondents aged 5 years and above whose labour force participation status is not known or not stated, write "99"

Columns P40–51: Particulars of all Live Births

88. **THE QUESTIONS IN COLUMNS P40 TO P51 APPLY TO ALL FEMALES AGED 12 YEARS AND OVER**

89. **Answers are required of ALL FEMALES in this category**. It does not matter whether or not they are married, never married, divorced or separated; whether or not they are still attending school; or what their relationship to the head of the household is. You must ask the questions of all females aged twelve years and over. First thing to do is check in column P11 and P12 and then identify all those to whom these questions should be posed. **Make sure you make your entries in the correct serial numbers for the eligible women.**

90. For all males and for girls below twelve years of age, leave columns P40 to P51 blank. Also, if a female aged 12 years and above has, for some reason, declined to respond to the questions, leave columns P40 to P51 blank. However, this will not be tolerated. For childless women, code "0" in the appropriate bigger boxes.

91. Many women do not like answering questions about their children. There are various reasons for this, but it is your job to obtain the answers. It will require firmness, politeness and tact.

92. Ask of all females aged 12 years and over "Have you borne any children alive?"

(a) A child borne alive is one who shows one or more of the following signs of life immediately after birth:

(i) crying or similar sounds
(ii) movement of the limbs or any other parts of the body
(iii) any other tangible signs of life.

The census is concerned only with children born alive. Do not include stillbirths, that is, children who were born dead and therefore did not show any sign(s) of life as above at the time of birth.

(b) If the woman has born any child alive, write the number of boys in the bigger box in P40 and the number of girls in P41 if it is a single digit. However, mark an "X" in the smaller box and then fill in the last digit for 10-19. The following are examples:

	0	= 0
	6	= 6
X	4	= 14

93. If the woman has born children alive, ask, "Of the children you have born alive, how many usually live with you in this household?" Write the number of boys who usually live in the household in column P42 and number of girls in column P43. If none of the boys or girls she has borne alive are living in the household, Write "0" in the appropriate boxes. **For female headed households, you should be able to verify this information from column P10 and P11.** If for example the woman has only two boys and two girls then you should write "2" in column P42 and "2" in column P43, leaving the smaller boxes in each sub-column blank.

94. Next ask, "of the children you have born alive, how many usually live elsewhere?"

(a) Write the number of boys who usually live elsewhere in column P44 and the number of girls in column P45. Fill in a single digit in the bigger box under the appropriate column if less than ten (10); for 10 and above mark an "X" the smaller box and fill in the last single digit in the bigger box. If none of the boys or girls she has borne alive live elsewhere, write, "0" in the appropriate bigger boxes, leaving the smaller boxes blank.

(b) Include in these columns all the children she has borne alive who usually live elsewhere. It may be that they have grown up and married, or have gone off to work, or are living with relatives, or are in a boarding school etc. Make sure that none of the children she has borne alive are missed out. Ask further questions to probe the matter fully - "Are any of your children away?" "At work?" "With relatives?", etc.

95. Then ask, "of the children you have born alive, how many have died?"

(a) Many people do not want to talk of the dead and many others find it painful to talk about their dead children. It is best to ask this question in a matter of fact way and without embarrassment. Please refer to paragraph 92(a) above for the definition of a live birth.

(b) Write the number of boys who have died in column P46 and number of girls in column P47 using the same procedure as in 94 (a). If none of the boys and girls she has borne alive have died, code "0" in the appropriate columns.

(c) If, in spite of your best efforts, you cannot obtain this information about the children who have died, leave columns P46 and P47 blank. However, you should not encourage this.

96. Before proceeding to columns P48-P51, probe to know whether the number of children given in columns P42-P47 is correct by comparing with the entry in columns P41 and P40. If these totals differ, probe further and adjust your entries accordingly.

97. Ask, "in what year and month was your last child born?" Record the month and year of birth in columns P48 and P49 respectively. Code the month in column P48 i.e. "01" for January, "02" for February, "12" for December. Code the last two digits of the year i.e. "80" for 1980, "89" for 1989 in column P49 etc.

98. Then ask, `Was it a boy or a girl?` Write the sex of the last borne child in column P50. Code "1" for male, "2" for female, "3" for male twins, "4" for female twins, "5" for twins with one of either sex, and "6" for other multiple births.

99. In column P51 indicate whether the child is still alive. If the last live birth is alive and living with the mother, check that year of birth agrees with the age of the child which is in column P12. If the dates do not agree, find out what has gone wrong and make any correction that is necessary. For single births code "1" if the child is still alive and "2" if dead. For twins code "3" if both twins are alive and "4" if only one of the twins is alive. For multiple births, code "5" if all the multiples are alive, "6" if two of the multiples are alive, "7" if only one of the multiples is alive and "8" if none of the multiples is alive. Write "9" if the survival status of the last birth is not known.

Columns H10-19: Housing Conditions and Amenities

100. **COLUMNS H10 TO H19 CONTAIN QUESTIONS PERTAINING TO HOUSING CONDITIONS AND AMENITIES AND ARE TO BE ASKED OF THE HEAD OF THE HOUSEHOLD OR ANY OTHER RESPONSIBLE PERSON.**

Column H10: Dwelling Units

101. For purposes of this census, a dwelling unit is a structure, which a household uses for sleeping, eating, entertaining guests, etc. A dwelling unit may be a whole structure or part of a structure, especially in the urban setting.

(a) Record the number of dwelling units available to a household in H10.

(b) You may encounter situations whereby a dwelling unit is shared by more than one household. Make sure you probe carefully and tactfully to establish such a scenario and consequently mark an "X" in the smaller box in H10 to indicate that the dwelling unit is shared. Do not assume that people sharing a dwelling unit belong to the same household.

(c) There are situations, especially in the rural areas whereby the kitchen is a stand-alone structure. Such a kitchen must be counted as a dwelling unit in its own right.

Column H11: Habitable Rooms

102. Record the number of habitable rooms available in all the dwelling units that belong to a household in H11.

(a) Habitable rooms are rooms in the dwelling units that are used mainly for living and exclude stores, granaries, offices, toilets and garages.

(b) A kitchen, under normal circumstances, should not be counted as a habitable room. However, if the household uses the kitchen for eating and/or sleeping purposes, or even for purposes of entertaining guests, then it should be counted with the habitable rooms. The same applies to a store.

Columns H12-15: Main Residential/Dwelling Unit

103. The questions in H12-15 elicit information on the status of tenure and the dominant construction materials of the main residential/dwelling unit
For census purposes, the structure where most of the household activities e.g. sleeping, cooking and eating take place will be defined as the main residential/dwelling unit.

Column H12: Status of Tenure

104. Column H12 seeks information on status of Tenure i.e. whether the dwelling unit is Owner occupied or Rented by the household. Ask the head of the household or any other responsible person "whether the main residential/dwelling unit is owned or rented by him/her or any other member of the household?" You are supposed to code the answers using the categories provided.

Owner occupied

(a) Under **Owner occupied** are listed:

Purchased
Means that a member of the household has bought the structure or is in the process of paying for the structure and household members are living in it.

Constructed
Means that a member of the household has built the structure they are living in.

Inherited
Means that a member of the household has received the building by (legal) right of succession or by a will. However in this case, do not ask for proof. Accept what the respondent says.

Rented

(b) Under **Rented** are listed dwelling units either provided by the employer of a member of the household or rented by a member of the household. This includes:

Government
Covers all houses rented or provided by the government of Kenya.

Local Authority
Covers municipal and city councils.

Parastatal
Covers organisations like Kenya Railways, Kenya Power & Lighting Co. Universities, etc.

Private Company
Covers private firms and foreign governments.

Individual rented
Covers private individuals only.

(c) **Other form of Tenure**
Covers unauthorised dwelling units

Columns H13-15: Construction Materials of the Main Dwelling Unit

105. Code in column H13 the construction materials used to build the roof e.g. code "1" for roof with corrugated iron sheets, "4" for Asbestos sheets etc. Tiles include clay, wooden tiles, fibre and cement, etc.

106. Code in column H14 the construction materials used to build the walls e.g. code "3" for mud/wood etc.

107. Code in column H15 the construction material used to build the floor e.g. code "1" for cement, "4" for earth, "3" for wood, "1" for tiles. Tiles include wooden tiles. Wood means wooden planks.

Columns H16–19: Household Amenities

108. **Columns H16 to H19 seek information on the type of facilities that are available to the household.**

Column H16: Main Source of Water

109. In column H16, ask "What is the main source of water for this household?" You are required to code the main source of water. This is the source from which for most part of the year the household draws its water. For example, if during the wet season the household draws water from a tank but then the longer part of the year draws from a river code "4" as main source of water.

The main sources of water listed are:

Pond
A small area of still water. Usually this water collects after rain or through an underground drainage.

Dam
A reservoir formed by building a barrier across river to hold back water and control its flow. A lot of these dams are built in dry areas of Kenya.

Lake
Usually bigger than a pond but has water collecting in it through rain, rivers etc. It is different from a dam in that it is not man-made.

Stream/river
This is a naturally flowing source of water.

Spring
Place where water springs or wells up from earth or basin.

Well
A man made shaft dug in the ground from which water is obtained. Water is drawn using buckets

Borehole
Same as the well as defined above but deeper than a well and has pump for drawing the water into a tank, buckets etc.

Piped
Means water drawn through pipes installed in a dwelling unit and originating in a central (public) source.

Jabias/Tanks
Rain water harnessed from any catchment into a hole/tank and used for domestic purposes.

Other
Any source that is not mentioned above.

Column H17: Main Type of Human Waste Disposal

110. In column H17 ask, "Where do members of this household dispose of human waste?" Code the answers according to the categories given below e.g. code 4 for pit latrine, 3 for cesspool etc. Sewage is the liquid waste matter drained away from the structure for disposal.

The categories of main type of sewage disposal are:

Main Sewer
Means the sewage liquid waste from the structure is drained by pipes into a main trunk sewer line. This type of sewage disposal is common in main urban centres like Nairobi, Mombasa etc.

Septic tank
Is a tank into which an individual household's sewage is conveyed and remains there until it is emptied. Examples of septic tanks are found in urban areas, where the tank is often located within the compound where you find dwelling structures.

Bucket Latrine
This is a bucket placed in a residential area used for human excreta. It is emptied occasionally. This type of waste disposal is now rare but can still be found in urban residential estates.

Cess Pool
Is a pool where liquid waste is drained into communally from the dwelling units until it is emptied.

Column H18: Main Cooking Fuel

111. "What is the main cooking fuel used in this household?" In column H18, note that some households may use electricity, paraffin, gas and firewood, all at the same time. The answer required here is the **fuel used most of the time**. Code appropriate answer in column H18.

Column H19: Main type of Lighting

112. In column H19 code the answer according to the categories given. Tin lamps include plastic and/or bottle lamps, karabai, etc.

K.N.B.
LIBRARY

PART IV: CHECK TO MAKE SURE THAT YOU HAVE COMPLETED THE QUESTIONNAIRE ACCURATELY AND COMPLETELY

113. Before leaving the household, check the questionnaire you have completed and make sure that you have completed it accurately and completely. **It is better to check your work on the spot than to have your supervisor send you back to correct mistakes.**

114. In particular, you should check that: no one has been missed out; others can read what you have written, i.e. your handwriting is legible; that no column has been left blank except for those who have refused to respond or those who are ineligible; that your entries can be read easily; that your entries agree item by item and that you have not written anything which cannot be corrected.

115. Check your work systematically. First make sure that the information identifying the household in the box at the top left-hand corner, has been entered. Next, look at the household in terms of relationships and ages of the people. Make sure that children are not shown as older than their parents; that men are not shown as having borne children; that babies are not shown as having university education, etc.

116. Then look at the questions you have completed for females aged 12 years and over. Check the ages of all females and make sure that you have made necessary entries. Make sure that you have written "0" in the appropriate column(s) if the woman has no children in a particular category.

117. Make sure that all persons aged 5 years and over have been asked the question in column P30.

118. If you find that things have gone wrong or that there are mistakes or omissions, ask further questions and correct your record. The questionnaire must be complete and accurate in all respects before you leave the household.

119. When you are satisfied that everything is in order, complete the summary information for the household on the front cover. Enter the household number and number of persons in the household.

120. When you have enumerated the members of the household, write the household number on the doorframe or any other convenient and conspicuous place. The household numbers are the ones you will allocate.

... and out of reach of children. Ask the people to leave the numbers intact up until the end of November 1999 so that they may be spared the inconvenience of unnecessary visits by census staff. Explain that the number is used for census purposes only and may be rubbed off after 3 months. Please thank the respondents for their co-operation before your departure.

121. When you have visited every household in your EA and have enumerated all persons who were in your EA on the **CENSUS NIGHT**, enter details of the province, district, division, location, sub-location and EA number on the front cover of each used book.

122. Record the number of days it takes to cover all the EAs assigned to you in the space provided to you at the front cover of the census book. When all is in order, sign each book in the space provided for the enumerator's signature. Your signature is your certificate that the information in the book is complete and correct.

123. As soon as you have checked your work, report to your supervisor. You will only be paid after you have handed in all the accountable documents (used and unused questionnaire and map(s), etc) and the Supervisor has ensured that you have done a good job.

REMEMBER THE SUCCESS OF THIS EXERCISE DEPENDS ENTIRELY ON YOUR CO-OPERATION, HARD WORK AND COMMITMENT MAKE THIS CENSUS THE BEST CENSUS TO BE CARRIED OUT IN OUR COUNTRY!!!

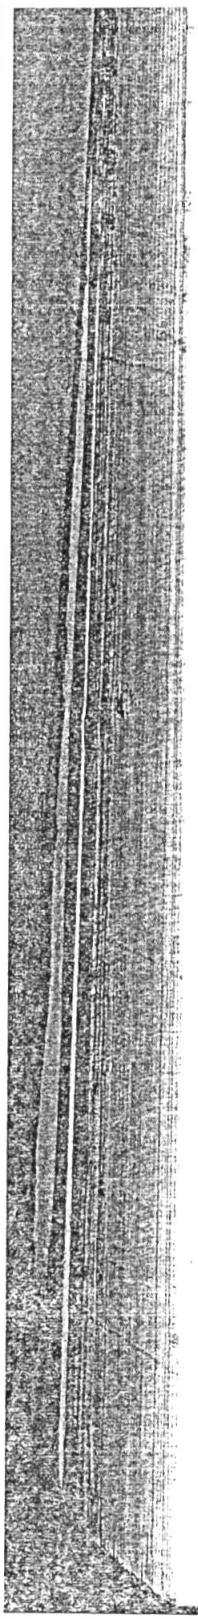
Calender of events by district were first compiled by District Commissioners for use during the 1962 Census. They have been revised subsequently and used during census exercises. Efforts have recently been made to revise calendars for districts where a lot of details were lacking. However, revision work is not complete and for some districts a lot of gaps still exist.

It is unfortunate that no events have been compiled for districts like Tana River. It is suggested that enumerators use calendars of Taita Taveta or Kilifi for Tana River or any other that may be issued by the District Census Officer.

Since Nairobi Province and other settlement districts like Trans Nzoia and Nyandarua are inhabited by people from various districts, no calendar of events have been compiled for them. Nevertheless, you may still use event calendars of respondent's district of birth for such areas.



YEAR	EVENT/AGE GROUP
1900	Ngaragu Famine
